HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New Jersey, Alabama, California
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 61-year-old male, who sustained an industrial injury on 5/28/2011. Diagnoses include cervical spondylosis, lumbosacral spondylosis, pain in joint shoulder and cervicalgia. Treatment to date has included surgical intervention (ACDF, 2012), rest, medications including Norco and physical therapy, which reportedly made the pain worse. Per the Primary Treating Physician's Progress Report dated 4/01/2015, the injured worker reported lower back pain during the day and left shoulder pain at night. Physical examination revealed normal station and gait. Sensation was intact to light touch over the upper and lower extremities. Motor strength was full and symmetric. The plan of care included medications and authorization was requested for Norco 10/325mg and Soma 350mg.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 10/325mg quantity 120: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Muscle Relaxants.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Criteria for use of opioids Page(s): 76-79.

Decision rationale: According to MTUS guidelines, Norco (Hydrocodone/Acetaminophen) is a synthetic opioid indicated for the pain management but not recommended as a first line oral analgesic. In addition and according to MTUS guidelines, ongoing use of opioids should follow specific rules: (a) Prescriptions from a single practitioner taken as directed, and all prescriptions from a single pharmacy. (b) The lowest possible dose should be prescribed to improve pain and function. (c) Office: Ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects. Four domains have been proposed as most relevant for ongoing monitoring of chronic pain patients on opioids: pain relief, side effects, physical and psychosocial functioning, and the occurrence of any potentially aberrant (or non-adherent) drug-related behaviors. These domains have been summarized as the "4A's" (analgesia, activities of daily living, adverse side effects, and aberrant drug taking behaviors). The monitoring of these outcomes over time should affect therapeutic decisions and provide a framework. According to the patient's file, there is no objective documentation of pain and functional improvement to justify continuous use of Norco. Norco was used for longtime without documentation of functional improvement or evidence of return to work or improvement of activity of daily living. Therefore, the prescription of Norco 10/325mg #120 is not medically necessary.

Soma 350mg quantity 30: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Non Steroidal Anti Inflammatory Drugs.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Soma Page(s): 29.

Decision rationale: According to MTUS guidelines, non-sedating muscle relaxants are recommended with caution as a second line option for short-term treatment of acute exacerbations in patients with chronic lumbosacral pain. Efficacy appears to diminish over time and prolonged use may cause dependence. According to the provided file, the patient was prescribed Soma for more than 3 weeks without clear evidence of spasm or excacerbation o pain. There is no justification for prolonged use of Soma. Therefore, the request for Soma 350mg #30 is not medically necessary.
