Re: Section 1630 of Title 8

Board:

1630 as you are aware states stairs are required based on 1629 and a CPH will be installed on buildings, structures, etc over 60 feet tall including etc etc.

Understanding the need for such on buildings and certain structures I don't understand the rational for parking garages being required to install a CPH when during construction, stairs are available as well as ramps that forklifts, cars, trucks, and delivery items, and personnel has access too.

Therefore, I am requesting a review of the 1630 standard to exclude parking garages.

Respectfully,

Herb Higgins
