#### **General Lab Comments**

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

#### **Definitions**

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.

ND = Not Detected, Testing result not detected above the LOD or LOQ.

NA = Not Applicable.

- \*\* No result could be reported, see sample comments for details.
- < Means this testing result is less than the numerical value.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

#### **General Lab Comments**

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

Defini i

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method media instrument sensiti ity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A erified alue of method media instrument sensiti ity.

ND = Not Detected, Testing result not detected abo e the LOD or LOQ.

NA = Not Applicable.

- < Means this testing result is less than the numerical alue.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than alues at or abo e the LOQ.

#### General Lab Comments

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

#### **Definitions**

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.

ND = Not Detected, Testing result not detected above the LOD or LOQ.

NA = Not Applicable.

- < Means this testing result is less than the numerical value.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

<sup>\*\*</sup> No result could be reported, see sample comments for details.

#### **General Lab Comments**

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

#### **Definitions**

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.

ND = Not Detected, Testing result not detected above the LOD or LOQ.

NA = Not Applicable.

- < Means this testing result is less than the numerical value.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

Page 6 of 6 Wed, 12/16/20 11:43 AM IHREP-V12.7

<sup>\*\*</sup> No result could be reported, see sample comments for details.

#### General Lab Comments

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

#### **Definitions**

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.

ND = Not Detected, Testing result not detected above the LOD or LOQ.

NA = Not Applicable.

- < Means this testing result is less than the numerical value.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

#### General Lab Comments

The results provided in this report relate only to the items tested.

Samples were received in acceptable condition unless otherwise noted.

The following was provided by the client: Sample ID, Collection Date, Sampling Location, Media Type, Sampling Parameter.

Collection Date, Media Type, and Sampling Parameter can potentially affect the validity of the results.

Samples have not been blank corrected unless otherwise noted.

This test report shall not be reproduced, except in full, without written approval of ALS.

ALS provides professional analytical services for all samples submitted. ALS is not in a position to interpret the data and assumes no responsibility for the quality of the samples submitted.

All quality control samples processed with the samples in this report yielded acceptable results unless otherwise noted.

ALS is accredited for specific fields of testing (scopes) in the following testing sectors. The quality system implemented at ALS conforms to accreditation requirements and is applied to all analytical testing performed by ALS. The following table lists testing sector, accreditation body, accreditation number and website. Please contact these accrediting bodies or your ALS project manager for the current scope of accreditation that applies to your analytical testing.

| Testing Sector      | Accreditation Body (Standard)    | Certificate<br>Number | Website                                                                                    |

#### **Definitions**

LOD = Limit of Detection = MDL = Method Detection Limit, A statistical estimate of method/media/instrument sensitivity.

LOQ = Limit of Quantitation = RL = Reporting Limit, A verified value of method/media/instrument sensitivity.

ND = Not Detected, Testing result not detected above the LOD or LOQ.

NA = Not Applicable.

- < Means this testing result is less than the numerical value.
- () This testing result is between the LOD and LOQ and has higher analytical uncertainty than values at or above the LOQ.

<sup>\*\*</sup> No result could be reported, see sample comments for details.

# **Certificate of Analysis**

ALS Project Contact: Lynne Wrona

ALS Project ID: TOXS100

**ALS WO#**: L2526958

Date of Report 22-Dec-20

Date of Sample Receipt 6-Nov-20

Client Name: ToxStrategies

Client Address: 27001 La Paz Road, Suite 260

Mission Viejo, CA 92691

United States

Client Contact: Stephanie Vivanco

Client Project ID: LA FIRE

COMMENTS: PCDD/F by EPA 1613B via Isotope Dilution

Some Extraction (internal) Standards gave recovery below the method acceptance criteria. Native results calculated by Isotope Dilution are inherently recovery corrected so no impact to overall data quality is expected.

Certified by:

Bradley Reimer

GC/MS Laboratory Senior Technical Specialist

Results in this certificate relate only to the samples as submitted to the laboratory.

Upper Bound PCDD/F TEQ (WHO 2005) 3.35

> Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample. Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency М Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL.

Indicates that a target analyte was detected below the calibrated range.

R  $Indicates \ that \ the \ ion \ abundance \ ratio \ for \ this \ compound \ did \ not \ meet \ the \ acceptance \ criterion.$ В Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

LQL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

 Toxic Equivalency - (WHO 2005)
 pg

 Lower Bound PCDD/F TEQ (WHO 2005)
 0.00360

 Mid Point PCDD/F TEQ (WHO 2005)
 3.29

 Upper Bound PCDD/F TEQ (WHO 2005)
 6.02

EDL Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample.

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency

M Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

J Indicates that a target analyte was detected below the calibrated range.

R Indicates that the ion abundance ratio for this compound did not meet the acceptance criterion.
B Indicates that this target was detected in the blank at greater than 10% of the sample concentration.
QL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

LQL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Mid Point PCDD/F TEQ (WHO 2005)
Upper Bound PCDD/F TEQ (WHO 2005) 1.24 2.48

Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample. Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency

М Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

 $Lower\ Quantification\ Limit,\ based\ on\ the\ lowest\ calibration\ level\ corrected\ for\ sample\ size,\ splits\ and\ dilutions.$ LQL EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

 3.08

EDL Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample.

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency

M Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

J Indicates that a target analyte was detected below the calibrated range.

B Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

LQL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample. Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency М Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

Indicates that a target analyte was detected below the calibrated range.

R  $Indicates \ that \ the \ ion \ abundance \ ratio \ for \ this \ compound \ did \ not \ meet \ the \ acceptance \ criterion.$ 

LQL  $Lower\ Quantification\ Limit,\ based\ on\ the\ lowest\ calibration\ level\ corrected\ for\ sample\ size,\ splits\ and\ dilutions.$ EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

#### Sample Analysis Report

 Sample Name
 ENG-168-DFP-01

 ALS Sample ID
 L2526958-8

 Analysis Method
 EPA 1613B

 Analysis Type
 Sample

Lower Bound PCDD/F TEQ (WHO 2005)

Mid Point PCDD/F TEQ (WHO 2005) Upper Bound PCDD/F TEQ (WHO 2005)

Sample Matrix

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Sample Size 1
Percent Moisture n/a
Split Ratio 2

Approved: *T.Patterson* --e-signature--21-Dec-2020

EDL Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample.

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency

M Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

Indicates that a target analyte was detected below the calibrated range.

R Indicates that the ion abundance ratio for this compound did not meet the acceptance criterion.

B Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

LQL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

0.0204

2.11 4.02

#### Sample Analysis Report

Sample Name DFP-BLANK
ALS Sample ID L2526958-9
Analysis Method EPA 1613B
Analysis Type Sample
Sample Matrix Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Sample Size 1
Percent Moisture n/a
Split Ratio 2

Approved: T.Patterson --e-signature--21-Dec-2020

Run Information Run 1

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this compound did not meet the acceptance criterion.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

EDL Indicates the Estimated Detection Limit, based on the measured background noise for this target in this sample.

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency.

M Indicates that a peak has been manually integrated.

U Indicates that a peak has been manually integrated.

U Indicates that this compound was not detected above the EDL.

J Indicates that a target analyte was detected below the calibrated range.

R Indicates that the ion abundance ratio for this compound did not meet the acceptance criterion.

LQL Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

EMPC Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

COMMENTS: PCB Congeners by EPA 1668C

PCB Congener Group Totals and Total PCB are a sum of detected values, including EMPC values,

consistent with USEPA CLP SOW CBC1.2

PCB-209 was detected in the method blanks above the method control limit. Reported sample data for this target may be elevated as a result.

\*\*\* REVISED REPORT \*\*\* (22-Dec-20)

This report supersedes all prior reports for the above-noted workorder and test. The report has been revised as follows:

The Laboratory Control Sample (LCS) was corrected for the levels in the Method Blank (elevated background level of PCB-209 caused marginal QC failure for native PCB-209 recovery)

\*\*\* REVISED REPORT #2 \*\*\* (2-Feb-21)

This report supersedes all prior reports for the above-noted workorder and test. The report has been revised as follows:

The recovery of 13C-PCB-209 Extraction (internal) Standard in the Laboratory Control Sample was below the method acceptance criterion. Native results calculated by Isotope Dilution are inherently recovery corrected so no significant impact to overall data quality is expected. The client samples demonstrated control within the method criteria for all Extraction Standards and were not impacted.

Certified by:

Bradley Reimer

GC/MS Laboratory Senior Technical Specialist

Results in this certificate relate only to the samples as submitted to the laboratory.

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

## Sample Analysis Report

 Sample Name
 BA-2

 ALS Sample ID
 L2526958-2

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

Run Information Run 1

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

## Sample Analysis Report

 Sample Name
 BA-3-BLANK

 ALS Sample ID
 L2526958-3

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

Sample Size 1
Percent Moisture n/a
Split Ratio 2

Sample

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run I

 Filename
 5-2011 3∪823

 Run Date
 01-Dec-2∪1:42

 Final Volume

## Sample Analysis Report

 Sample Name
 BA-3-BLANK

 ALS Sample ID
 L2526958-3

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

Sample Size 1 Sample
Percent Moisture n/a
Split Ratio 2

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run I

 Filename
 5-20113∪B23

 Run Date
 01-Dec-20 01:42

 Final Volume
 25
 ul

 Dilution Factor
 1

Analysis Units pg

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration. В Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

## Sample Analysis Report

 Sample Name
 356-4

 ALS Sample ID
 L2526958-4

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

## Sample Analysis Report

 Sample Name
 356-4

 ALS Sample ID
 L2526958-4

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

Run Information

 $\begin{array}{cccc} Filename & 5-201130B27 \\ Run Date & 01-0e^{-2}0 & 04:30 \\ Final Volume & 25 & u \\ Dilution Factor & 1 \\ Analysis Units & pg \\ \end{array}$ 

Instrument - Column HRMS-5 SPBOCTYL256001-01

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration. В Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

## Sample Analysis Report

 Sample Name
 356-5

 ALS Sample ID
 L2526958-5

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run 1

 Filename
 5-2011 30 B≥8

 Run Date
 01-Dec-20 05:13

 Final Volume
 25 ul

 Dilution Factor
 1

 Analysis Units
 pg

## Sample Analysis Report

 Sample Name
 356-5

 ALS Sample ID
 L2526958-5

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 3-Nov-20 Extraction Date 25-Nov-20

| Sample | Sample | Percent Moisture | n/a | Split Ratio | 2 | |

Approved: E. Sabljic --e-signature--01-Dec-2020

Run Information Run 1

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

## **Sample Analysis Report**

 Sample Name
 ENG-558-DFP-02

 ALS Sample ID
 L2526958-6

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Sample Size 1
Percent Moisture n/a
Split Ratio 2

Sample

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run I

 Filename
 5-2011 3∪829

 Run Date
 01-Dec-2∪ 5:55

 Final Volume
 25
 u

 Dilution Factor
 1
 u

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

Indicates that a peak has been manually integrated.

Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

## **Sample Analysis Report**

 Sample Name
 ENG-583-DFP-02

 ALS Sample ID
 L2526958-7

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run I

 Filename
 5-2011 J S I

 Run Date
 01-De-2 J S 37

 Final Volume
 25 ul

 Dilution Factor
 1

 Analysis Units
 pg

Indicates that a peak has been manually integrated.

U

В

EMPC

Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

## Sample Analysis Report

 Sample Name
 ENG-168-DFP-01

 ALS Sample ID
 L2526958-8

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run 1

 Filename
 5-201130B31

 Run Date
 01-Dec-20 07:19

 Final Volume
 25 ul

 Dilution Factor
 1

 Analysis Units
 pg

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

В

EMPC

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

#### Sample Analysis Report

 Sample Name
 DFP-BLANK

 ALS Sample ID
 L2526958-9

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

Sample Size 1 Sample
Percent Moisture n/a
Split Ratio 2

Approved: E. Sabljic --e-signature--01-Dec-2020

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions. Indicates that a peak has been manually integrated. U Indicates that this compound was not detected above the EDL. Indicates that the analyte was positively identifed. The associated numerical result is an estimate. Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration. В Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

#### **Sample Analysis Report**

 Sample Name
 ENG-159-DFP-1

 ALS Sample ID
 L2526958-10

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run 1

 Filename
 5-201130B32

 Run Date
 01-Dec-20 08:02

 Final Volume
 25 ul

 Dilution Factor
 1

 Analysis Units
 pg

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

Indicates that a peak has been manually integrated.

Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

#### Sample Analysis Report

 Sample Name
 ENG-583-DFP-01

 ALS Sample ID
 L2526958-11

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run 1

 Filename
 5-201130B15

 Run Date
 30-Nov-20 19:54

 Final Volume
 25
 ul

 Dilution Factor
 1

 Analysis Units

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

Indicates that a peak has been manually integrated.

Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.

#### **Sample Analysis Report**

 Sample Name
 ENG-558-DFP-01

 ALS Sample ID
 L2526958-12

 Analysis Method
 EPA 1668C

 Analysis Type
 Sample

 Sample Matrix
 Swab

Sampling Date 4-Nov-20 Extraction Date 25-Nov-20

 Sample Size
 1
 Sample

 Percent Moisture
 n/a

 Split Ratio
 2

Approved: E. Sabljic --e-signature--01-Dec-2020

 Run Information
 Run I

 Filename
 5-2011 J SIG

 Run Date
 30-Nov - 20:36

 Final Volume
 25
 u

 Dilution Factor
 1
 y

TEF Indicates the Toxic Equivalency Factor TEQ Indicates the Toxic Equivalency LQL M Lower Quantification Limit, based on the lowest calibration level corrected for sample size, splits and dilutions.

Indicates that a peak has been manually integrated.

Indicates that this compound was not detected above the EDL.

Indicates that the analyte was positively identifed. The associated numerical result is an estimate.

Indicates that this target was detected in the blank at greater than 10% of the sample concentration.

Estimated Maximum Possible Concentration – elevated detection limit due to interference or positive id criterion failure

Indicates that the ion abundance ratio for this analyte did not meet the control limit. The reported value represents an estimated concentration.
