FIRST CAUSE FOR DISCIPLINE

(Gross Negligence)

8. Respondent is subject to disciplinary action under sections 2227 and 2234, as defined by section 2234, subdivision (b), of the Code, in that he committed gross negligence in his care and treatment of patients D.L.; J.B. and C.D., as more particularly alleged hereinafter:

PATIENT D.L.

9. On or about October 27, 2006, respondent began treating patient D.L., a then-47 year old male with chronic diagnoses which included, but were not limited to, chronic obstructive pulmonary disease (COPD), alcoholism, anxiety, seizure, bipolar, social phobia, history of stroke, myocardial infarction and hepatitis C.¹

10. During the period of on or about July 19, 2008, to on or about May 20, 2009, respondent had numerous visits with patient D.L. For the majority of these visits, there was no physical examination performed or documented and the patient histories were non-existent and/or inadequate. In addition, for the majority of these visits there was also no documentation regarding, among other things, injury specifics, ongoing specific symptoms, past imaging and/or testing, risks of opiate use and/or other controlled substances, justification for any changes in controlled substances, any management plan for the patient and/or any documentation indicating periodic drug screening, efforts to monitor compliance and/or measures to ensure respondent was not diverting controlled substances or taking additional controlled substances.

11. On or about November 10, 2010, patient D.L. was admitted to the emergency room at El Centro Regional Medical Center (RMC) where another physician examined him. The patient was seen for chest pain and shortness of breath, which was determined to be non-cardiac in nature. Patient D.L. was given pain medication and discharged home. The medical documentation noted that patient D.L. was using Percocet 1 tab four times a day; Xanax 0.5 mg four times a day; Vicodin 1 tab four times a day; and other pain related medications.

¹ Conduct occurring more than seven (7) years from the filing date of this Accusation is for informational purposes only and is not alleged as a basis for disciplinary action.
12. During the period of on or about November 20, 2010, to on or about February 6, 2011, respondent had approximately nine visits with patient D.L. For the majority of these visits, there was no physical examination performed or documented, and the patient histories were nonexistent and/or inadequate. In addition, for the majority of these visits there was also no documentation regarding, among other things, injury specifics, ongoing specific symptoms, past imaging and/or testing, risks of opiate use and/or other controlled substances, justification for any changes in controlled substances, any management plan for the patient and/or any documentation indicating periodic drug screening, efforts to monitor compliance and/or measures to ensure respondent was not diverting controlled substances or taking additional controlled substances.

13. On or about February 7, 2011, patient D.L. was admitted to the El Centro RMC with a chief complaint of chest pain and esophageal pain. The admission note indicates, among other things, that patient D.L. had been drinking and that he “complains of pain all over the body and requests narcotics.” The past medical history is noted as positive for, among other things, hepatitis C, chronic lower back pain, COPD, myocardial infarction and history of chronic narcotic use. The assessment was “abdominal pain after an alcoholic binge related to mild pancreatitis and possible gastritis with GERD.”

14. On or about March 8, 2011, patient D.L. was admitted again to the El Centro RMC for chest pain and esophageal pain. Patient D.L. was noted to have been drinking and “complains of pain all over the body and requests narcotics.” The admission diagnoses were alcoholic pancreatitis disease, tobacco abuse, chronic narcotic use and history of seizure disorder. Patient D.L. was diagnosed as having acute pancreatitis secondary to alcohol use and was, among other things, placed on IV fluids and clear liquids. His medications were listed as Albuterol, Depakote 500 mg in the morning and 1000 mg at nighttime, Vicodin, OxyContin, Xanax and Percocet. Patient was discharged against medical advice on March 20, 2011. The “primary care physician” section of the discharge note indicates, “None identified, although somehow he [patient D.L.] gets his Depakote and pain medications from an MD in the community.”
15. During the period of on or about July 2, 2012, to on or about September 4, 2012, respondent issued three prescriptions to patient D.L. for hydrocodone APAP (with acetaminophen) 5/500 mg in the total amount of 480 tabs and three prescriptions for OxyContin\(^3\) 30 mg in the total amount of 270 tabs. This prescribing pattern represented a morphine equivalent dosage in excess of 160 mg per day and an acetaminophen dosage of 2.5 grams per day. The morphine equivalent dosage in excess of 160 mg per day exceeded the acceptable level.

16. During the period of on or about January 3, 2011, to on or about April 9, 2013, respondent had numerous visits with patient D.L. For the majority of these visits, there was no physical examination performed or documented and the patient histories were non-existent and/or inadequate. In addition, for the majority of these visits there was also no documentation regarding, among other things, injury specifics, ongoing specific symptoms, past imaging and/or testing, risks of opiate use and/or other controlled substances, justification for any changes in controlled substances, any management plan for the patient and/or any documentation indicating periodic drug screening, efforts to monitor compliance and/or measures to ensure respondent was not diverting controlled substances or taking additional controlled substances.
