I'm guessing that the most common use would be in getting longer boards (2x4, 2x6, 2x8) that may come to the yard in 12' of 16' lengths get re-sawn to a shorter length as per a job order.

Thank you very much Ken....if you were to pin the top two or three uses for the saw at the yards, what would they be...I suspect truss lumber, pallets, etc.??

Thanks very much, your name will be on the notification list for this rulemaking and I will keep you in the loop.

Regards,

Mjm

Mike –

There are about 300 independent lumber yard locations in California. These range from the sole owner yard to companies that operate as many as 12-18 yards.

In asking a question on jump saw use by our member businesses, it would appear that about 70% use a jump saw in their operation. Some report several such saws in use.

How does this help you data collection.
