OMFS Update for Physician and Other Practitioner Services  
(Effective January 1, 2014)

1. Data Sources
   a. The Medicare 2014 update to the Medicare physician fee schedule was
displayed at the Federal Register on November 27, 2013 and was
published on December 10, 2013. It is entitled "Revisions to Payment
Policies under the Physician Fee Schedule, Clinical Laboratory Fee
Schedule and Other Revisions to Part B for CY 2014 (CMS-1600-FC).
b. The Federal Register document and supporting files are available at
https://www.cms.gov/Medicare/Medicare-Fee-for-Service-
Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices-
Items/CMS-1600-FC.html?DLPage=1&DLSort=3&DLSortDir=descending.

2. Title 8 CCR §9789.19:
For services rendered on or after January 1, 2014,
   a. The 2014 annual increase in the Medicare Economic Index (MEI) is 0.8%.
The MEI is an input price index that accounts for annual changes in the
various resources involved in providing physician services.
b. The Relative Value Scale (RVS) adjustment factor for anesthesia services
is 1.0291 and 1.0477 for all services other than anesthesia. The 2014 RVS
adjustment factors are the product of the RVU budget neutrality factor and
RVU rescaling adjustment factors.
   1. The RVU budget neutrality factor to offset an estimated decrease
in allowances due to the 2014 RVU changes is 1.00046. The same
factor applies to anesthesia and all other services.
   2. The rescaling adjustment factor accounts for changes in the MEI
cost shares. The MEI is an input price index that accounts for annual changes in the various resources involved in providing
physician services. Revisions to the cost weights used in MEI
increased the cost share for physician work and reduced the cost
share for practice expenses. The RVUs for practice expenses and
malpractice were rescaled (reduced) so that the proportion of
RVUs attributable to these cost components is consistent with the
revised MEI cost weights. The rescaling adjustment factor offsets
the estimated decrease in allowances due to the 2014 rescaling of
the RVUs so that rescaling does not change estimated aggregate
allowances. For all services, the rescaling adjustment factor is
1.04718. For anesthesia, there is an additional anesthesia practice
expense adjustment of .9823 to adjust the MEI rescaling factor to
account for the lower cost share attributable to practice expense in
the anesthesia conversion factor.
   3. The RVS adjustment factor for all services other than anesthesia is
the product of the RVU budget neutrality factor and the rescaling
adjustment factor. The RVS adjustment factor equals 1.0477
(1.00046 x 1.04718 ).
4. The RVS adjustment factor for anesthesia is the product of the RVU budget neutrality factor, the rescaling adjustment factor and the anesthesia practice expense adjustment factor. The RVS adjustment factor equals 1.0291 (1.00046 x 1.04718 x .9823).

c. The cumulative adjustment to the conversion factors (CFs) between 2012 and 2014 are shown in Column G of Table 1 and are the products of the MEI and RVS adjustment factors for 2013 and 2014.
  
  1. The 2013 anesthesia adjustment factor is 1.0073 (1.008 x .99932). The 2014 adjustment factor is 1.0370 (1.008 x 1.0291). The 2014 cumulative adjustment factor is 1.0499 (1.0073 x 1.0370).
  
  2. The 2013 adjustment factor for all other services is 1.0073 (1.008 x .99932). The 2014 adjustment factor is 1.0560 (1.008 x 1.0477). The 2014 cumulative percentage change is 1.0638 (1.0073 x 1.0560).

d. The unadjusted 2014 CFs are in §9789.12.5(b)(2) and are a blend of 75 percent of the OMFS budget neutral CF and 25 percent of 120 percent of the Medicare 2012 CF. The 2014 CFs adjusted for the cumulative change in the MEI and RVS adjustment factors are shown in Table 2.

e. The Division has updated the statewide geographic adjustment factors (GAFs) based on the 2014 revised locality-specific geographic practice cost index (GCPIs) set forth in Addendum E Geographic Practice Cost
Indices (GPCIs) CY2014 CMS 1600FC. The statewide GAFs are an average of the locality-specific GPCIs for each cost component weighted by each locality’s estimated share of RVUs for the applicable cost component. The weighting results in statewide values that are estimated to be budget neutral to the allowances that would result from using locality-specific GPCI values. The average statewide anesthesia GAF is a weighted average of the locality-specific anesthesia GAF calculated using the anesthesia cost shares available at http://www.cms.gov/Center/Provider-Type/Anesthesiologists-Center.html. These cost shares are: work, .7645; practice expense, .1522, and .0833. The weighting factor is each locality’s estimated share of allowances for anesthesia services.

1. Average Statewide Work GAF: 1.040
2. Average Statewide Practice Expense GAF: 1.1606
3. Average Statewide Malpractice Expense GAF: 0.6636
4. Average Statewide Anesthesia GAF: 1.0313
