HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Preventative medicine and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 39-year-old female with a 6/3/13 date of injury. At the time (7/23/14) of request for authorization for , Cyclobenzaprine/Tramadol/Flurbiprofen, Capsaicin/ Flurbiprofen/ Tramadol/ Menthol/ Camphor, there is a documentation of subjective (ongoing pain in her neck, shoulders, elbow/forearms, hands/wrists, and upper/middle and lower back) and objective (tenderness to palpation of the paraspinal musculature, along the coracoid process, the spine of the scapula, acromion, and distal clavicle of both shoulders, there is slightly diminished light touch in both hands) findings, current diagnoses (Cervical spine sprain/strain), and treatment to date (Prolotherapy of Left Shoulder and medications).

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

CYCLOBENZAPRINE/TRAMADOL/FLURBIPROFEN, CAPSAICIN/FLURBIPROFEN/TRAMADOL/MENTHOL/CAMPBOR: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines TOPICAL ANALGESICS.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113.

Decision rationale: MTUS Chronic Pain Medical Treatment Guidelines identifies that " many agents are compounded as monotherapy or in combination for pain control; that ketoprofen, Lidocaine (in creams, lotion or gels), capsaicin in a 0.0375% formulation, baclofen and other muscle relaxants, and gabapentin and other Antiepilepsy drugs are not recommended for topical applications; and that any compounded product that contains at least one drug (or drug class) that is not recommended, is not recommended." Within the medical information available for review, there is documentation of a diagnosis of Cervical spine sprain/strain. However, the requested Cyclobenzaprine/ Tramadol/ Flurbiprofen, Capsaicin/ Flurbiprofen/ Tramadol/ Menthol/ Camphor contains at least one drug/drug class (Cyclobenzaprine and Capsaicin) that is not recommended. Therefore, based on guidelines and a review of the evidence, the request for Cyclobenzaprine/ Tramadol/ Flurbiprofen, Capsaicin/ Flurbiprofen/ Tramadol/ Menthol/ Camphor is not medically necessary.
