HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Occupational Medicine and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The patient is a 59 year-old male with date of injury 02/25/2009. The medical document associated with the request for authorization, a primary treating physician's progress report, dated 08/26/2014, lists subjective complaints as bilateral knee pain. PR-2 was handwritten and difficult to read. Objective findings: Examination of the right knee revealed tenderness to palpation of the left lateral knee, right patella, and right medial knee. Range of motion for both knees was 0-120 degrees. Motor examination was 4/5 for bilateral lower extremities. No diagnosis was documented on the PR-2. Patient is status post right and left total knee replacements in 2011 and 2012.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Functional capacity evaluation: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation OFFICIAL DISABILITY GUIDELINES (ODG)

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Fitness For Duty, Functional capacity evaluation (FCE)

Decision rationale: The Official Disability Guidelines state that a functional capacity evaluation is appropriate if, case management is hampered by complex issues, and the timing is appropriate; such as if the patient is close to being at maximum medical improvement or additional clarification concerning the patient's functional capacity is needed. Functional capacity evaluations are not needed if the sole purpose is to determine a worker's effort or compliance, or the worker has returned to work. There is no documentation in the medical record to support a functional capacity evaluation based on the above criteria. As such the request is not medically necessary.
