### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Anesthesiology has a subspecialty in Pain Management and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 57-year-old male with a 8/28/90 date of injury. At the time (6/10/14) of request for authorization for Terocin patches #10, there is documentation of subjective (left shoulder and cervical spine complaints) and objective (cervical spine tenderness at the left trapezius muscle, positive Spurling to the left; left shoulder tenderness at the subacromial space, positive Neer, Hawkins, O'Brien, biceps, and apprehension signs) findings, diagnoses (left shoulder impingement syndrome and cervical radiculopathy), and treatment to date (orthotics and medications (including Tramadol, Neurontin, and Naproxen)).

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Terocin patches #10:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesic. Decision based on Non-MTUS Citation Official Disability Guidelines.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113.

**Decision rationale:** Terocin patch contains ingredients that include Lidocaine and Menthol. MTUS Chronic Pain Medical Treatment Guidelines identifies that many agents are compounded as monotherapy or in combination for pain control; that Ketoprofen, Lidocaine (in creams, lotion

or gels), Capsaicin in a 0.0375% formulation, Baclofen and other muscle relaxants, and Gabapentin and other antiepilepsy drugs are not recommended for topical applications; and that any compounded product that contains at least one drug (or drug class) that is not recommended, is not recommended. Within the medical information available for review, there is documentation of diagnoses of left shoulder impingement syndrome and cervical radiculopathy. However, Terocin contains at least one drug (Lidocaine) that is not recommended. Therefore, based on guidelines and a review of the evidence, the request for Terocin patches #10 is not medically necessary.
