### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 23 year old male with an industrial injury dated 01/16/2012. His diagnoses include lumbosacral disc injury, lumbosacral radiculopathy, lumbosacral strain/sprain, and broad based central disc protrusion of the L5-S1. Diagnostic testing has included x-rays of the lumbar spine (06/12/2013) showing no acute abnormalities. He has been treated with medication management, previous epidural steroid injections to the lumbar spine (06/05/2013) and physical therapy, and a home exercise program. In a progress note dated 07/23/2014, the treating physician reports continuing pain and discomfort. The objective examination revealed localized tenderness to palpation with trigger point in the lumbosacral paraspinal and gluteal region. The treating physician is requesting physical therapy which was denied by the utilization review. On 01/12/2015, Utilization Review non-certified a request for physical therapy 2 times per week for 4 weeks for the lumbar spine, noting the absence of documented reduction in pain and lack of functional improvement with previous therapy. The MTUS and ODG Guidelines were cited. On 01/23/2015, the injured worker submitted an application for IMR for review of physical therapy 2 times per week for 4 weeks for the lumbar.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Physical Therapy 2 times a week for 4 weeks, Lumbar Spine:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Page(s): 98,99.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

**Decision rationale:** Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for 9-10 visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The Physical Therapy 2 times a week for 4 weeks, Lumbar Spine is not medically necessary and appropriate.
