HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Iowa, Illinois, Hawaii

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine, Public Health & Gen Prev Med

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This male sustained an industrial injury to bilateral wrists on 1/25/12 due to repetitive trauma. The injured worker was diagnosed with bilateral carpal tunnel syndrome. The injured worker underwent bilateral carpal tunnel release (right 1/21/13, left 11/19/02). In a PR-2 dated 12/18/14, the injured worker complained of numbness and weakness to bilateral wrists. Current diagnoses were carpal tunnel syndrome and flexor carpi radialis tendonitis. Current medication included Norco 5/325mg every twelve hours as needed for pain. The treatment plan included refiling Norco and obtaining a urine drug screen. On 1/8/15, Utilization Review noncertified a request for a urine drug screen citing CA MTUS and ODG Guidelines. As a result of the UR denial, an IMR was filed with the Division of Workers Comp.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Urine drug screen: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG)

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids and Substance abuse Page(s): 74-96; 108-109. Decision based on Non-MTUS Citation University of Michigan Health System Guidelines for Clinical Care: Managing Chronic Non-terminal Pain, Including Prescribing Controlled Substances

Decision rationale: MTUS states that use of urine drug screening for illegal drugs should be considered before therapeutic trial of opioids are initiated. Additionally, "Use of drug screening or inpatient treatment with issues of abuse, addiction, or poor pain control. Documentation of misuse of medications (doctor-shopping, uncontrolled drug escalation, drug diversion) would indicate need for urine drug screening." There is insufficient documentation provided to suggest issues of abuse, addiction, or poor pain control by the treating physician. University of Michigan Health System Guidelines for Clinical Care: Managing Chronic Non-terminal Pain, Including Prescribing Controlled Substances (May 2009) recommends for stable patients without red flags "twice yearly urine drug screening for all chronic non-malignant pain patients receiving opioids, once during January-June and another July-December." The patient has been on chronic opioid therapy. The treating physician has not indicated why a urine drug screen is necessary at this time and has provided no evidence of red flags. As such, the request for a urine drug screen is not medically necessary.
