HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 40 year old female, who sustained an industrial injury on February 26, 2014, incurring foot ankle and back injuries after a fall on her right side. She was diagnosed with plantar fasciitis, and a right foot sprain. Treatment included physical therapy, pain medications, muscle relaxants, anti-inflammatory drugs, ice, heat, massage therapy and exercises, orthotics, steroid injections, and work modifications and restrictions. Currently, the injured worker complained of persistent left foot pain. She continued to have pain in the right heel and pain with range of motion. She had a positive straight leg raising test. The treatment plan that was requested for authorization included a prescription for LidoPro cream.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

LidoPro cream 4 oz tube x2: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 71.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics, pages 111-113.

Decision rationale: Chronic symptoms and clinical findings remain unchanged with medication refilled. The patient exhibits diffuse tenderness and pain on the exam to the spine and extremities with radiating symptoms. The chance of any type of topical improving generalized symptoms and functionality significantly with such diffuse pain is very unlikely. Topical Lidocaine is indicated for post-herpetic neuralgia, according to the manufacturer. There is no evidence in any of the medical records that this patient has a neuropathic source for the diffuse pain. Without documentation of clear localized, peripheral pain to support treatment with Lidocaine along with functional benefit from treatment already rendered, medical necessity has not been established. There are no evidenced-based studies to indicate efficacy of capsaicin 0.0325% formulation and that this increase over a 0.025% formulation would provide any further efficacy over oral delivery. There is no documentation of intolerance to oral medication as the patient is on other oral analgesic. The LidoPro cream 4 oz tube x2 is not medically necessary and appropriate.
