HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: New Jersey, Alabama, California

Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 39 year old male with an industrial injury dated 09/01/2011. The injured worker's diagnoses include lumbar spine sprain/strain. Treatment consisted of diagnostic studies, prescribed medications, physical therapy and periodic follow up visits. In a progress note dated 05/26/2015, the injured worker reported low back pain. Objective findings revealed right mid-anterior thigh, right mid lateral calf, right lateral ankle sensations were intact. The treating physician prescribed services for sleep study consultation now under review.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Sleep Study Consultation: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines: Pain chapter - Polysomnography.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Polysomnography, <http://www.worklossdatainstitute.verioiponly.com/odgtwc/pain.htm>.

Decision rationale: According to ODG guidelines, a sleep study is "Recommended after at least six months of an insomnia complaint (at least four nights a week), unresponsive to behavior intervention and sedative/sleep-promoting medications, and after psychiatric etiology has been excluded. A polysomnogram measures bodily functions during sleep, including brain waves, heart rate, nasal and oral breathing, sleep position, and levels of oxygen saturation. It is administered by a sleep specialist, a physician who is Board eligible or certified by the American Board of Sleep Medicine, or a pulmonologist or neurologist whose practice comprises at least 25% of sleep medicine. (Schneider-Helmert, 2003) According to page 3-17 of the AMA Guides (5th Ed), sleep disorder claims must be supported by formal studies in a sleep laboratory. (Andersson, 2000) Unattended / portable / in home sleep studies are not recommended because there is a lack of scientific evidence supporting their effectiveness. Criteria for Polysomnography: In-lab polysomnograms / sleep studies are recommended for the combination of indications listed below: (1) Excessive daytime somnolence; (2) Cataplexy (muscular weakness usually brought on by excitement or emotion, virtually unique to narcolepsy); (3) Morning headache (other causes have been ruled out); (4) Intellectual deterioration (sudden, without suspicion of organic dementia); (5) Personality change (not secondary to medication, cerebral mass or known psychiatric problems); (6) Insomnia complaint for at least six months (at least four nights of the week), unresponsive to behavior intervention and sedative/sleep-promoting medications and psychiatric etiology has been excluded. A sleep study for the sole complaint of snoring, without one of the above mentioned symptoms, is not recommended". In summary, and according to ODG guidelines, sleep studies are recommended after at least 6 months of insomnia unresponsive to behavior intervention and sedative/sleep-promoting medications, and after psychiatric etiology has been excluded. It is not clear from the patient file, that the above therapies were tried before requesting a sleep study. There is no recent documentation of sleep dysfunction. Therefore, the requested for Sleep study consultation is not medically necessary.
