### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
 State(s) of Licensure: New York  
 Certification(s)/Specialty: Anesthesiology

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The 42 year old male injured worker suffered an industrial injury on 1/24/2006. The diagnoses included lumbar spine sprain/strain. The injured worker had been treated with medications left sacroiliac joint injections. On 4/24/2015, the treating provider reported the injured worker desired to begin to decrease opioid medications. On exam, there was lumbar spine tenderness with spasms and positive straight leg raise along with reduced range of motion. The pain was rated with medications 2 to 3/10 and without medications 5 to 6/10 for duration of 4 hours without side effects. The treatment plan included Norco.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Norco 10/325mg #90:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Opioids for the treatment of chronic pain Page(s): 91-97. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Opioids.

**Decision rationale:** According to the CA MTUS and ODG, Norco 10/325mg (Hydrocodone/Acetaminophen) is a short-acting opioid analgesic indicated for moderate to moderately severe pain, and is used to manage both acute and chronic pain. The treatment of chronic pain with any opioid analgesic requires review and documentation of pain relief, functional status, appropriate medication use, and side effects. A pain assessment should include current pain, intensity of pain after taking the opiate, and the duration of pain relief. In this case, there is insufficient evidence that the opioids were prescribed according to the CA MTUS guidelines, which recommend prescribing according to function, with specific functional goals, return to work, random drug testing, an opioid contract, and documentation of a prior failure of non-opioid therapy. In addition, the MTUS recommends urine drug screens for patients with poor pain control and to help manage patients at risk of abuse. There is no documentation of significant pain relief or increased function from the opioids used to date. Medical necessity of the requested medication has not been established. Of note, discontinuation of an opioid analgesic should include a taper to avoid withdrawal symptoms. The requested medication is not medically necessary.
