HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Maryland

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 34-year-old male who sustained an industrial injury on 02/26/14. Initial complaints and diagnoses are not available. Treatments to date include medications and therapies. Diagnostic studies are not addressed. Current complaints include bilateral elbow and left wrist pain. Current diagnoses include bilateral lateral epicondylitis and left wrist pain. In a progress note dated 04/23/15, the treating provider reports the plan of care as a functional capacity evaluation. The requested treatment is a functional capacity evaluation.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Functional Capacity Evaluation: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 11 Forearm, Wrist, and Hand Complaints.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 5 Cornerstones of Disability Prevention and Management Page(s): 91. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Fitness For Duty- Functional capacity evaluation (FCE).

Decision rationale: Functional capacity evaluation is not medically necessary per the ODG and MTUS Guidelines. The MTUS states that in many cases, physicians can listen to the patient's history, ask questions about activities, and then extrapolate, based on knowledge of the patient and experience with other patients with similar conditions. If a more precise delineation is necessary to of patient capabilities than is available from routine physical examination under some circumstances, this can best be done by ordering a functional capacity evaluation of the patient. The ODG states that if a worker is actively participating in determining the suitability of a particular job, the FCE is more likely to be successful. A FCE is not as effective when the referral is less collaborative and more directive. One should consider an FCE if case management is hampered by complex issues such as prior unsuccessful return to work attempts or if there are conflicting medical reporting on precautions and/or fitness for modified job. An FCE can be considered also if the injuries that require detailed exploration of a worker's abilities. The documentation is not clear why the patient's capabilities cannot be evaluated from a routine physical examination. There are no documents revealing complex work issues or conflicting medical reports. The request for a functional capacity evaluation is not medically necessary.
