HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: California, Arizona, Maryland
 Certification(s)/Specialty: Psychiatry

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 36 year old male, who sustained an industrial injury on 4/1/2013. The mechanism of injury is documented as pain and numbness in the hands, fingers and wrists from prolonged typing. The injured worker was diagnosed as having major depressive disorder and anxiety. There is no record of a recent diagnostic study. Treatment to date has included medication management. In a progress note dated 5/6/2015, the injured worker complains of depression and anxiety. Physical examination showed anxiety. The treating physician is requesting Alprazolam 0.5 mg #120.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Alprazolam 0.5mg #120: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Benzodiazepine.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topic: Benzodiazepine, Weaning of medications Page(s): 24, 124.

Decision rationale: MTUS states "Benzodiazepines are not recommended for long-term use because long-term efficacy is unproven and there is a risk of dependence. Most guidelines limit use to 4 weeks. Their range of action includes sedative/hypnotic, anxiolytic, anticonvulsant, and muscle relaxant. Chronic benzodiazepines are the treatment of choice in very few conditions. Upon review of the Primary Treating Physicians' Progress Reports, the injured worker has been prescribed Alprazolam 0.5 mg four times daily on an ongoing basis with no documented plan of taper. The MTUS guidelines state that the use of benzodiazepines should be limited to 4 weeks. Thus the request for Alprazolam 0.5mg #120 is not medically necessary.
