

Case Number:	CM15-0121352		
Date Assigned:	07/02/2015	Date of Injury:	02/24/2014
Decision Date:	07/30/2015	UR Denial Date:	06/12/2015
Priority:	Standard	Application Received:	06/23/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: North Carolina
 Certification(s)/Specialty: Family Practice

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This 41 year old male sustained an industrial injury on 2/24/14. He subsequently reported right knee pain. Diagnoses include right knee ACL tear with medial meniscal tear. Treatments to date include x-ray and MRI testing, physical therapy, modified work duty and prescription pain medications. The injured worker continues to experience right knee pain. Upon examination, there is positive Lachman and anterior drawer testing, which is compared to his contralateral side, which is normal. A request for Gadolinium MRI of the right knee was made by the treating physician.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Gadolinium MRI (Magnetic Resonance Imaging) of the right knee: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 13 Knee Complaints Page(s): 341-343. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Treatment Index, 13th Edition (web), 2015, Knee (updated 05/05/15), MRI (Magnetic Resonance Imaging).

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 13 Knee Complaints Page(s): 343-347.

Decision rationale: The ACOEM chapter on knee complaints, states that MRI is indicated to determine the extent of ACL tear preoperatively. Reliance only on imaging studies to evaluate the source of knee symptoms may carry a significant risk of diagnostic confusion (false-positive test results) because of the possibility of identifying a problem that was present before symptoms began, and therefore has no temporal association with the current symptoms. Even so, remember that while experienced examiners usually can diagnose an ACL tear in the non-acute stage based on history and physical examination, these injuries are commonly missed or over diagnosed by inexperienced examiners, making MRIs valuable in such cases. Criteria per the ACOEM for ordering an MRI of the knee in the provided documentation for review have not been met. Therefore, the request is not certified.
