HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New Jersey, Alabama, California
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This 53 year old woman sustained an industrial injury on 6/26/2010. The mechanism of injury is not detailed. Evaluations include left knee MRI dated 4/8/2015. Diagnoses include status post left knee surgery, possible left knee medial meniscus tear, and Baker's cyst of the left knee. Treatment has included oral medications, stretching, heat, physical therapy, home exercise program, and surgical intervention. Physician notes dated 4/28/2015 show complaints of worsening left knee pain rated 6/10. Recommendations include Duloxetine, Naproxen, Pantoprazole, urine drug screening, and follow up in four weeks.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Urine toxicology screen: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Drug testing Page(s): 43.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, steps to avoid misuse/addiction Page(s): 77-78; 94.

Decision rationale: According to MTUS guidelines, urine toxicology screens is indicated to avoid misuse/addiction. "(j) Consider the use of a urine drug screen to assess for the use or the presence of illegal drugs". There is no evidence that the patient have aberrant behavior for urine drug screen. There is no clear evidence of abuse, addiction and poor pain control. There is no documentation that the patient has a history of use of illicit drugs. Therefore, the request for Urine drug screen is not medically necessary.
