HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: North Carolina

Certification(s)/Specialty: Family Practice

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 53 year old male, who sustained an industrial injury on 10/03/2014. He reported acute low back pain from cumulative trauma. Diagnoses include lumbar spine disc protrusion and posterior annular tear, cervical strain and post-traumatic stress disorder. Treatments to date include activity modification, medication therapy, acupuncture treatments, and physical therapy. Currently, he complained of pain in the neck and low back associated with bilateral lower extremity symptoms. On 6/2/15, the physical examination documented findings that were difficult to decipher. The plan of care included a cervical spine MRI.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

MRI of the cervical spine: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints Page(s): 177-178.

Decision rationale: The ACOEM chapter on neck and upper back complaints and special diagnostic studies states: Criteria for ordering imaging studies are: Emergence of a red flag. Physiologic evidence of tissue insult or neurologic dysfunction. Failure to progress in a strengthening program intended to avoid surgery. Clarification of the anatomy prior to an invasive procedure. The provided progress notes fails to show any documentation of indications for imaging studies of the neck as outlined above per the ACOEM. There was no emergence of red flag. The neck pain was characterized as unchanged. The physical exam noted no evidence of new tissue insult or neurologic dysfunction. There is no planned invasive procedure. Therefore, criteria have not been met for a MRI of the cervical spine and the request is not medically necessary.
