HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 58 year-old female who sustained an industrial injury on 07/13/10. She reported right hand pain after repetitive activities. Current diagnoses include carpal tunnel syndrome, and right thumb trigger finger. Diagnostic tests and treatments to date include EMG/NCS, carpal tunnel release 2014, acupuncture, pain medication management, and physical therapy that helped reduce her pain. Currently, the injured worker complains of weakness and pain in the right hand and upper extremity; surgical intervention has not particularly improved her symptoms. Therapy goals are to increase hand strength. Requested treatments include hand therapy for the right hand, 6 sessions. The injured worker's work/disability status reports she is retired. Date of Utilization Review: 06/25/15.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Hand therapy for the right hand, 6 sessions: Upheld

Claims Administrator guideline: Decision based on MTUS Postsurgical Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Therapy, pages 98-99.

Decision rationale: Occupational therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified occupational therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the OT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for 9-10 visits of occupational therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal OT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further occupational therapy when prior treatment rendered has not resulted in any functional benefit. The Hand therapy for the right hand, 6 sessions is not medically necessary and appropriate.
