Date Assigned:	09/15/2015	Date of Injury:	12/25/2009
Decision Date:	10/21/2015	UR Denial Date:	09/02/2015
Priority:	Standard	Application Received:	09/03/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California, Texas, Florida

Certification(s)/Specialty: Anesthesiology, Pain Management, Hospice & Palliative Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 68 year old male who sustained an industrial injury on 12-25-2009. Medical records indicates the injured worker was being treated for multilevel lumbar degenerative, lumbar spondylosis and radiculopathy, upper back pain, and right lower extremity pain. Medical records dated 8-28-2015 indicate back pain, left leg, and multiple stabbing and burning pain. Without medications pain was rated a 7-8 out of 10 and a 3 out 10 with medications. On 7-23-2015 pain without medications was a 7-8 out 10 and with medications a 4-5 out of 10. He was having difficulty with activities of daily living. Physical examination noted he continued to ambulate with a single point cane. He had an antalgic gait to the left. Lateral bending left and right, flexion and extension of the lumbar spine are less than 50% normal. Treatment has included medications. Norco has been prescribed since at least 3-4-2015. The Utilization review form dated 9-2-2015 noncertified Norco 10-325mg #90.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 10/325mg #90: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Medical Treatment 2009.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Medical Treatment 2009, Section(s): Opioids (Classification), Opioids, California Controlled Substance Utilization Review and Evaluation System (CURES) [DWC], Opioids, criteria for use, Opioids for chronic pain, Opioids for neuropathic pain, Opioids for osteoarthritis, Opioids, cancer pain vs. nonmalignant pain, Opioids, dealing with misuse & addiction, Opioids, differentiation: dependence & addiction, Opioids, dosing, Opioids, indicators for addiction, Opioids, long-term assessment.

Decision rationale: Regarding the request for Norco (hydrocodone/acetaminophen), California Pain Medical Treatment Guidelines state that Norco is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation available for review, there is no indication that the medication is improving the patient's function (in terms of specific examples of objective functional improvement), and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested Norco (hydrocodone/acetaminophen) is not medically necessary.
