HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: California
 Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker (IW) is a 55 year old, male who sustained an industrial injury on 06/24/2014. He reported a slip and fall injury with pain in his back. The injured worker was diagnosed as having cerebral concussion with headaches, memory and cognitive problems, lumbosacral sprain with right more than left sciatica; sexual dysfunction and increasing urinary incontinence; and adjustment disorder with anxious and depression mood. Treatment to date has included medications and chiropractic care. On 11/14/2014, the worker complained of lumbar spine pain rated an 8/10 with bilateral lower extremity pain and numbness. Pain radiated to the legs. On physical examination there was tenderness to palpation of the thoracic and lumbosacral spine. The worker complains of anxiety, depression and sleep disturbance. He presents with mild distress, has erect posture and walks with stiffness and an antalgic gait. His pain medications are being taken as directed with no adverse effects and are helping with pain. The treatment plan includes medications and physical therapy. A request for authorization is made for the following: Physical therapy 3 times a week x 4 weeks (12 sessions) thoracic and lumbar.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Physical therapy 3 times a week x 4 weeks (12 sessions) thoracic and lumbar: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Guidelines Page(s): 99.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

Decision rationale: Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The Physical therapy 3 times a week x 4 weeks (12 sessions) thoracic and lumbar is not medically necessary and appropriate.
