HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New Jersey, Michigan, California
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 37 year old female with an industrial injury dated July 11, 2012. The injured worker diagnoses include lumbar sprain and strain, thoracic or lumbosacral neuritis or radiculitis unspecified, displacement of thoracic or lumbar intervertebral disc without myelopathy, and degeneration of thoracic or lumbar intervertebral disc. She has been treated with diagnostic studies, prescribed medications and periodic follow up visits. In a progress note dated 1/26/2015, the injured worker complained of low back pain. The treating physician submitted medical documentations were handwritten and illegible. The treating physician prescribed services for pain management consult as an outpatient. Utilization Review determination on February 3, 2015 denied the request for pain management consult as an outpatient.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Pain management consult as an outpatient: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines
Guidelines Chronic pain programs, early intervention Page(s): 32-33.

Decision rationale: According to MTUS guidelines, the presence of red flags may indicate the need for specialty consultation. In addition, the requesting physician should provide a documentation supporting the medical necessity for a pain management evaluation with a specialist. The documentation should include the reasons, the specific goals and end point for using the expertise of a specialist. In the chronic pain programs, early intervention section of MTUS guidelines stated: "Recommendations for identification of patients that may benefit from early intervention via a multidisciplinary approach: (a) The patient's response to treatment falls outside of the established norms for their specific diagnosis without a physical explanation to explain symptom severity. (b) The patient exhibits excessive pain behavior and/or complaints compared to that expected from the diagnosis. (c) There is a previous medical history of delayed recovery. (d) The patient is not a candidate where surgery or other treatments would clearly be warranted. (e) Inadequate employer support. (f) Loss of employment for greater than 4 weeks. The most discernible indication of at risk status is lost time from work of 4 to 6 weeks. (Mayer 2003)." There is no clear documentation that the patient needs a pain management evaluation as per MTUS criteria. There is no clear documentation that the patient had delayed recovery and a response to medications that falls outside the established norm. The provider did not document the reasons, the specific goals and end point for using the expertise of a specialist. Therefore, the request for Pain Management consultation is not medically necessary.
