HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 34-year-old male, with a reported date of injury of 09/24/2008. The diagnoses include degenerative lumbar disc disease with radiculopathy at L4, myofascial pain syndrome. Treatments to date have included acupuncture, home exercise program, trigger point injections over the bilateral low back and buttocks, oral medications, and topical pain medications. The medical report dated 01/06/2015 indicates that the injured worker had problems with his low back. He stated that he had increasing pain with radiation to the right thigh. The physical examination showed guarded movement, tenderness to palpation over the low back and buttocks, intact motor and sensation, and negative straight leg raise. The treating physician requested Lidoderm cream with four refills and hydrocodone/acetaminophen solution.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Lidoderm 5 percent Cream #60g prescribed with 4 refills: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 112 of 127.

Decision rationale: Regarding request for topical lidocaine, Chronic Pain Medical Treatment Guidelines recommend the use of topical lidocaine for localized peripheral pain after there has been evidence of a trial of the 1st line therapy such as tri-cyclic antidepressants, SNRIs, or antiepileptic drugs. Guidelines go on to state that no commercially approved topical formulations of lidocaine cream, lotion, or gel are indicated for neuropathic pain. Within the documentation available for review, there is no indication that the patient has failed first-line therapy recommendations. Furthermore, guidelines do not support the use of topical lidocaine preparations which are not in patch form. As such, the currently requested topical lidocaine is not medically necessary.

Hydrocodone/APAP Sol 7.5-325 #120 cc: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 44, 47, 75-79, 120 of 127.

Decision rationale: Regarding the request for Norco (hydrocodone/acetaminophen), California Pain Medical Treatment Guidelines state that this is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation available for review, there is no indication that the medication is improving the patient's function or pain (in terms of specific examples of functional improvement and percent reduction in pain or reduced NRS), no documentation regarding side effects, and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested Norco (hydrocodone/acetaminophen) is not medically necessary.
