HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New York, Tennessee
 Certification(s)/Specialty: Emergency Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 37 year old male, who sustained an industrial injury on October 5, 2012. The injured worker had reported a low back injury. The diagnoses have included lumbar sprain, lumbar degenerative disc disease and sciatica. Treatment to date has included medications, a transcutaneous electrical nerve stimulation unit and a home exercise program. A progress note dated November 11, 2014 notes that the injured worker complained of low back pain. The physical examination noted that he had tenderness to palpation of the right lumbar spine and right buttock. He also had right hip pain with movement and a decreased range of motion of the right lower extremity. Current documentation dated January 14, 2015 notes that the injured worker reported increased low back pain radiating to the left side, rated at a seven out of ten on the Visual Analogue Scale. A physical examination was not noted. On January 26, 2015 Utilization Review non-certified a request for retrospective Lidopro Cream 121 gm times 2, date of service was January 14, 2015. The MTUS, Chronic Pain Medical Treatment Guidelines, were cited.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Retro - Lidopro Cream 121gm (x2): Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Pain Interventions and Guidelines Page(s): 111-112. Decision based on Non-MTUS Citation UpToDate: Camphor and menthol Treatment Guidelines from the Medical Letter, April 1, 2013, Issue 128: Drugs for pain.

Decision rationale: Lidopro cream is a topical analgesic containing capsaicin, Lidocaine, menthol, and methyl salicylate. Topical analgesics are recommended for neuropathic pain when anticonvulsants and antidepressants have failed. Compounded topical analgesics are commonly prescribed and there is little to no research to support the use of these compounds. Furthermore, the guidelines state that Any compounded product that contains at least one drug (or drug class) that is not recommended is not recommended. Capsaicin is recommended only as an option in patients who have not responded or cannot tolerate other treatments. It is recommended for osteoarthritis, fibromyalgia, and chronic non-specific back pain and is considered experimental in high doses. Lidocaine is recommended for localized peripheral pain after the evidence of a trial for first-line therapy. It is only FDA approved for the treatment of post-herpetic neuralgia. The guidelines state that further research is needed to recommend this treatment for chronic neuropathic pain. It is not recommended. Methylsalicylate is a topical salicylate and is recommended, being significantly better than placebo in chronic pain. Topical analgesics containing menthol, methylsalicylate or capsaicin are generally well-tolerated, but there have been rare reports of severe skin burns requiring treatment or hospitalization. Menthol is not recommended. This medication contains drugs that are not recommended. Therefore the medication cannot be recommended. The request should not be authorized.
