Decision Date:	04/20/2015	UR Denial Date:	02/03/2015
Priority:	Standard	Application Received:	03/02/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: Illinois, California, Texas
 Certification(s)/Specialty: Orthopedic Surgery

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 60-year-old male who sustained an industrial injury on 1/22/06. The mechanism of injury was not documented. The 5/30/14 left shoulder MRI impression documented moderate rotator cuff tendinosis with low-moderate grade intrasubstance tear at the anterior supraspinatus with possible bursal-sided communication and reactive subacromial/subdeltoid bursitis. There was mild to moderate acromioclavicular (AC) joint arthrosis with undersurface osteophytes. The 1/28/15 treating physician report cited marked left shoulder pain and instability. Physical exam documented marked external rotation weakness with a positive impingement sign. Left shoulder arthroscopy with PASTA (partial articular supraspinatus tendon avulsion) repair and acromioplasty was scheduled for 2/9/15. The 2/3/15 utilization review certified a request for left shoulder arthroscopy with PASTA repair and acromioplasty, post-operative physical therapy 3x4, pre-operative clearance, and shoulder sling. The request for a cold therapy unit was modified and approved for 7 days. The requests for assistant surgeon and post-operative pain pump were non-certified.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Assistant surgeon: Overturned

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Centers for Medicare and Medicaid services Physician Fee Schedule Assistant Surgeons
<http://www.cms.gov/apps/physician-fee-schedule/overview.aspx>.

Decision rationale: The California MTUS guidelines do not address the appropriateness of assistant surgeons. The Center for Medicare and Medicaid Services (CMS) provide direction relative to the typical medical necessity of assistant surgeons. The Centers for Medicare & Medicaid Services (CMS) has revised the list of surgical procedures which are eligible for assistant-at-surgery. The procedure codes with a 0 under the assistant surgeon heading imply that an assistant is not necessary; however, procedure codes with a 1 or 2 implies that an assistant is usually necessary. For this requested surgery, CPT codes 29827 and 29826, there is a 2 in the assistant surgeon column for each procedure. Therefore, based on the stated guideline and the complexity of the procedure, this request is medically necessary.

Post op cold therapy unit: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Shoulder: Continuous flow cryotherapy.

Decision rationale: The California MTUS is silent regarding cold therapy units. The Official Disability Guidelines state that continuous-flow cryotherapy is an option for up to 7 days in the post-operative setting following shoulder surgery. The 2/3/15 utilization review decision recommended partial certification of a cold therapy unit for 7-day rental. There is no compelling reason in the medical records to support the medical necessity of a cold therapy unit beyond the 7-day rental already certified. Therefore, this request is not medically necessary.

Post op pain pump: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Shoulder, Postoperative pain pump.

Decision rationale: The California MTUS guidelines are silent regarding this device. The Official Disability Guidelines state that post-operative pain pumps are not recommended. Guidelines state there is insufficient evidence to conclude that direct infusion is as effective as or

more effective than conventional pre- or postoperative pain control using oral, intramuscular or intravenous measures. Three recent moderate quality randomized controlled trials did not support the use of pain pumps. Given the absence of guideline support for the use of post-operative pain pumps, this request is not medically necessary.
