HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Maryland

Certification(s)/Specialty: Internal Medicine, Rheumatology

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This 56-year-old female sustained an industrial injury on 2/9/12. She subsequently reported head, neck and low back injury. Diagnoses include spondylolisthesis and lumbar radiculopathy. Treatments to date have included x-rays, MRIs, injections, modified work duty, physical therapy, surgery and prescription pain medications. The injured worker continues to experience head, neck and low back pain. A request for Lidocaine medication was made by the treating physician.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Lidocaine 5%, 700mg, #90/30/0: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Lidoderm (lidocaine patch); Topical Analgesics.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical analgesics Page(s): 111.

Decision rationale: This 56-year-old female has complained of low back pain since date of injury 2/9/12. She has been treated with surgery, injections, physical therapy and medications. The current request is for Lidocaine 5%. Per the MTUS guidelines cited above, the use of topical

analgesics in the treatment of chronic pain is largely experimental, and when used, is primarily recommended for the treatment of neuropathic pain when trials of first line treatments such as anticonvulsants and antidepressants have failed. There is no such documentation in the available medical records. On the basis of the MTUS guidelines cited above, Lidocaine 5% is not indicated as medically necessary.
