HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Iowa, Illinois, Hawaii

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine, Public Health & General Preventive Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 57 year old female who sustained an industrial injury on 6/20/96. The mechanism of injury is unclear. She is currently experiencing constant, dull, achy lumbosacral pain. She has difficulty with activities of daily living involving walking, standing, and sitting. She is experiencing sleep difficulties. Medications are not identified. Treatments to date include acupuncture lumbar spine. In the progress note dated 3/1/15 the treating provider reports current pain level 6/10 for the lumbar spine. The Utilization review was for retrospective review/ activity pain index for date of service 3/2/15.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Activity pain index, provided on March 2, 2015: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Pain Procedure Summary.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Pain, Office Visits.

Decision rationale: ODG states concerning office visits: "Recommended as determined to be medically necessary. Evaluation and management (E&M) outpatient visits to the offices of medical doctor(s) play a critical role in the proper diagnosis and return to function of an injured worker, and they should be encouraged. The need for a clinical office visit with a health care provider is individualized based upon a review of the patient concerns, signs and symptoms, clinical stability, and reasonable physician judgment. The determination is also based on what medications the patient is taking, since some medicines such as opiates, or medicines such as certain antibiotics, require close monitoring. As patient conditions are extremely varied, a set number of office visits per condition cannot be reasonably established. The determination of necessity for an office visit requires individualized case review and assessment, being ever mindful that the best patient outcomes are achieved with eventual patient independence from the health care system through self-care as soon as clinically feasible." ACOEM states regarding assessments: "The content of focused examinations is determined by the presenting complaint and the area(s) and organ system(s) affected." And further writes that covered areas should include "Focused regional examination" and "Neurologic, ophthalmologic, or other specific screening." The information that is being requested is part of a normal physical exam; the rationale behind this request is unclear. As such, the request for Activity pain index, provided on March 2, 2015 is not medically necessary.
