### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: North Carolina

Certification(s)/Specialty: Family Practice

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 53 year old female with an industrial injury dated October 17, 2014. The injured worker diagnoses include cervical sprain/strain, rotator cuff tear, and pain in knee/patellofemoral syndrome. Treatment consisted of diagnostic studies, prescribed medications and periodic follow up visits. In a progress note dated 3/23/2015, the injured worker reported inability to sleep due to right shoulder pain. The injured worker also reported the swelling of right upper extremity, tingling of neck toward right shoulder, and right knee pain with buckling. Objective findings revealed no change. The treating physician prescribed services for MRI of the cervical spine now under review.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**MRI of the cervical spine:** Upheld

**Claims Administrator guideline:** Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints.

**MAXIMUS guideline:** Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints Page(s): 177-178.

**Decision rationale:** The ACOEM chapter on neck and upper back complaints and special diagnostic studies states: Criteria for ordering imaging studies are: Emergence of a red flag. Physiologic evidence of tissue insult or neurologic dysfunction. Failure to progress in a strengthening program intended to avoid surgery. Clarification of the anatomy prior to an invasive procedure. The provided progress notes fails to show any documentation of indications for imaging studies of the neck as outlined above per the ACOEM. There was no emergence of red flag. The neck pain was characterized as unchanged. The physical exam noted no evidence of new tissue insult or neurologic dysfunction. There is no planned invasive procedure. Therefore, criteria have not been met for a MRI of the neck and the request is not certified.
