HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: California
 Certification(s)/Specialty: Orthopedic Surgery

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 64 year old female, who sustained an industrial injury on 5/1/14. She reported pain in her knees, right worse than left due to repetitive duties. The injured worker was diagnosed as having right knee lateral and medial meniscus tear, right knee Baker's cyst and right knee chondromalacia. Treatment to date has included cortisone injections and pain medications. As of the PR2 dated 3/20/15, the injured worker reports ongoing knee pain. The treating physician noted a positive McMurray's sign and significant knee effusion and swelling in the right knee. The treatment plan includes right knee surgery, pre-operative clearance and post-operative physical therapy. The treating physician requested pre-operative medical clearance and testing and physical therapy x 12 sessions post-operatively for the right knee.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

1 Preoperative medical clearance and testing: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines, Low Back, Preoperative testing.

Decision rationale: CA MTUS/ACOEM is silent on the issue of preoperative clearance and testing. ODG, Low back, Preoperative testing general, is utilized. This chapter states that preoperative testing is guided by the patient's clinical history, comorbidities and physical examination findings. ODG states, "These investigations can be helpful to stratify risk, direct anesthetic choices, and guide postoperative management, but often are obtained because of protocol rather than medical necessity. The decision to order preoperative tests should be guided by the patient's clinical history, comorbidities and physical examination findings. Patients with signs or symptoms of active cardiovascular disease should be evaluated with appropriate testing, regardless of their preoperative status. Electrocardiography is recommended for patients undergoing high risk surgery and those undergoing intermediate risk surgery who have additional risk factors. Patients undergoing low risk surgery do not require electrocardiography. Based on the information provided for review, there is no indication of any of these clinical scenarios present in this case. In this case the patient is a healthy 64 year old without comorbidities or physical examination findings concerning to warrant preoperative testing prior to the proposed arthroscopy. Therefore the determination is for non-certification. The request is not medically necessary.

12 Sessions of Post operative physical therapy for the right knee: Upheld

Claims Administrator guideline: Decision based on MTUS Postsurgical Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Postsurgical Treatment Guidelines Page(s): 24.

Decision rationale: According to the CA MTUS/Post Surgical Treatment Guidelines, Knee Meniscectomy, page 24, 12 visits of therapy are recommended after arthroscopy with partial meniscectomy over a 12-week period. The guidelines recommend initially of the 12 visits to be performed. As the request exceeds the initial allowable visits, the determination is for non-certification. The request is not medically necessary.
