### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
State(s) of Licensure: North Carolina  
Certification(s)/Specialty: Family Practice

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 38 year old female who sustained an industrial injury on March 25, 2014. She has reported injury to the lower back and left elbow and has been diagnosed with lumbar disc displacement, sciatica, left rotator cuff sprain/strain, left radio humeral sprain/strain, and left carpal tunnel sprain/strain. Treatment has included injection, physical therapy, a home exercise program, and medications. Currently the injured worker complains of pain to the lumbar spine, left wrist and hand, left elbow, and left shoulder. The treatment request included lumbar support orthosis.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Lumbar support orthosis specifically Apollo LSO or equivalent:** Upheld

**Claims Administrator guideline:** Decision based on MTUS ACOEM Chapter 12 Low Back Complaints.

**MAXIMUS guideline:** Decision based on MTUS ACOEM Chapter 12 Low Back Complaints  
Page(s): 301.

**Decision rationale:** The ACOEM chapter on low back complaints and treatment recommendations states: Lumbar supports have not been shown to have any lasting benefit beyond the acute phase of symptom relief. This patient has chronic ongoing low back complaints and is status post-lumbar laminectomy. Per the ACOEM, lumbar supports have no lasting benefit outside of the acute phase of injury. This patient is well past the acute phase of injury and there is no documentation of acute flare up of chronic low back pain. Therefore, criteria for use of lumbar support per the ACOEM have not been met and the request is not medically necessary.
