### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
 State(s) of Licensure: California  
 Certification(s)/Specialty: Physical Medicine & Rehabilitation

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 53 year old male who sustained an industrial injury on 03/27/01. Initial complaints and diagnoses are not available. Treatments to date include medications. Diagnostic studies include a MRI. Current complaints include low back pain. Current diagnoses include lumbago and lumbar radiculopathy. In a progress noted dated 01/14/15 the treating provider reports the plan of care as water therapy and capsaicin cream. The requested treatments are a TENS unit 1 month rental and physical therapy.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Transcutaneous electrical nerve stimulation (TENS) unit 1 month rental:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines TENS, chronic pain (transcutaneous electrical nerve stimulation) Page(s): 114-116.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Transcutaneous Electrotherapy, TENS for chronic pain, pages 114-117.

**Decision rationale:** Per MTUS Chronic Pain Treatment Guidelines, ongoing treatment is not advisable if there are no signs of objective progress and functional restoration has not been demonstrated. Specified criteria for the use of TENS Unit include trial in adjunction to ongoing treatment modalities within the functional restoration approach as appropriate for documented chronic intractable pain of at least three months duration with failed evidence of other appropriate pain modalities tried such as medication. From the submitted reports, the patient has received extensive conservative medical treatment to include chronic analgesics and other medication, extensive physical therapy, activity modifications, yet the patient has remained symptomatic and functionally impaired. There is no documentation on how or what TENS unit is requested nor is there any documented short-term or long-term goals of treatment with the TENS unit. There is no evidence for change in functional status, increased in ADLs, decreased VAS score, medication usage, or treatment utilization from the treatment already rendered. The treatment is not medically necessary and appropriate.

**Physical therapy times 1 visit lumbar spine:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Page(s): 98-99.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

**Decision rationale:** Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The Physical therapy times lumbar spine is not medically necessary and appropriate.
