HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 55 year old male, who sustained an industrial injury on 12/5/14. The injured worker has complaints of neck and right shoulder pain and discomfort. The documentation noted that the injured worker does have a history of prior injury to his neck but it was more on the left side. The diagnoses have included right shoulder periscapular sprain/strain with impingement syndrome and cervical musculoligamentous sprain/strain with right upper extremity radiculitis. Treatment to date has included X-ray of the cervical spine revealed a decrease in the cervical lordotic curvature and decreased disc height at C5-C6 with mild spondylosis. The request was for 6 sessions of physical therapy for the right shoulder (2 times a week for 3 weeks). Several documents within the submitted medical records are difficult to decipher.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

6 sessions of physical therapy for the right shoulder (2 times a week for 3 weeks): Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 98-99 of 127. Decision based on Non-MTUS Citation ODG, Shoulder Chapter, Physical Medicine.

Decision rationale: Regarding the request for physical therapy, Chronic Pain Medical Treatment Guidelines recommend a short course (10 sessions) of active therapy with continuation of active therapies at home as an extension of the treatment process in order to maintain improvement levels. ODG has more specific criteria for the ongoing use of physical therapy. ODG recommends a trial of physical therapy. If the trial of physical therapy results in objective functional improvement, as well as ongoing objective treatment goals, then additional therapy may be considered. Within the documentation available for review, there is no documentation of specific objective functional improvement with any previous sessions and remaining deficits that cannot be addressed within the context of an independent home exercise program, yet are expected to improve with formal supervised therapy. In light of the above issues, the currently requested physical therapy is not medically necessary.
