

Case Number:	CM15-0091659		
Date Assigned:	05/18/2015	Date of Injury:	12/10/2013
Decision Date:	06/22/2015	UR Denial Date:	05/05/2015
Priority:	Standard	Application Received:	05/12/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 45-year-old male, who sustained an industrial injury on 12/10/13. The injured worker has complaints of cervical spine pain, lumbar spine pain and left shoulder pain. The documentation noted on examination that his cervical spine range of motion is 75 percent of full, with pain noted at all endpoints. The diagnoses have included cervicalgia; C5 through C7 spinal stenosis; thoracic spine sprain/strain and left shoulder sprain/strain. The documentation noted that the injured worker is working without restrictions and will continue to do so. The documentation noted that he injured worker takes tramadol as needed for pain. The request was for tramadol 50mg #60 with 2 refills.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Tramadol 50mg #60 with 2 refills: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, tramadol Page(s): 76-80, 94.

Decision rationale: Tramadol is a centrally acting opioid agonist and also inhibits the reuptake of serotonin and norepinephrine. On July 2, 2014, the DEA published in the Federal Register the final rule placing tramadol into schedule IV of the Controlled Substances Act. This rule became effective on August 18, 2014. The CPMTG specifies that this is a second line agent for neuropathic pain. Given its opioid agonist activity, it is subject to the opioid criteria specified on pages 76-80 of the CPMTG. With regard to this request, the California Chronic Pain Medical Treatment Guidelines state the following about on-going management with opioids: "Four domains have been proposed as most relevant for ongoing monitoring of chronic pain patients on opioids: pain relief, side effects, physical and psychosocial functioning, and the occurrence of any potentially aberrant (or non-adherent) drug-related behaviors. These domains have been summarized as the '4A's' (analgesia, activities of daily living, adverse side effects, and aberrant drug-taking behaviors). The monitoring of these outcomes over time should affect therapeutic decisions and provide a framework for documentation of the clinical use of these controlled drugs." Guidelines further recommend discontinuing opioids if there is no documentation of improvement in function and reduction in pain. In the progress reports available for review, the primary treating physician did not adequately document monitoring of the four domains. Improvement in function was not clearly outlined. This can include a reduction in work restrictions or significant gain in some aspect of the patient's activities. Furthermore, there was no discussion regarding possible aberrant drug-related behavior. There was no documentation of a signed opioid agreement, no indication that a periodic urine drug screen (UDS) was completed, and no recent CURES report was provided to confirm that the injured worker is only getting opioids from one practitioner. Based on the lack of documentation, medical necessity of this request cannot be established at this time. Although this opioid is not medically necessary at this time, it should not be abruptly halted, and the requesting provider should start a weaning schedule as he or she sees fit or supply the requisite monitoring documentation to continue this medication.
