### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This 64-year-old man sustained an industrial injury on 4/26/2004. The mechanism of injury is not detailed. Diagnoses include thoracic spine neuritis, left leg foot drop, and insomnia. Treatment has included oral medications and surgical intervention. Physician notes dated 3/31/2015 show complaints of thoracic and left foot pain and difficulty with sleep. Recommendations include Hydrocodone/Acetaminophen, Ambien, and follow up in three months.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Norco 10/325mg #60:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines The 4 A's for ongoing monitoring Page(s): 78.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 44, 47, 75-79, 120 of 127.

**Decision rationale:** Regarding the request for Norco, California Pain, Medical Treatment Guidelines state that this is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation available for review, there is no indication that the medication is improving the patient's function or pain (in terms of specific examples of functional improvement and percent reduction in pain or reduced NRS) and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested Norco is not medically necessary.

**Zolpidem 10mg #30 with 2 refills:** Upheld

**Claims Administrator guideline:** The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Zolpidem (Ambien).

**MAXIMUS guideline:** The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation OFFICIAL DISABILITY GUIDELINES (ODG) Chronic Pain, Sleep Medication, Insomnia treatment.

**Decision rationale:** Regarding the request for zolpidem (Ambien), California MTUS guidelines are silent regarding the use of sedative hypnotic agents. ODG recommends the short-term use (usually two to six weeks) of pharmacological agents only after careful evaluation of potential causes of sleep disturbance. They go on to state the failure of sleep disturbances to resolve in 7 to 10 days, may indicate a psychiatric or medical illness. Within the documentation available for review, there is no current description of the patient's insomnia, no discussion regarding what behavioral treatments have been attempted, and no statement indicating how the patient has responded to Ambien treatment. Furthermore, there is no indication that Ambien is being used for short-term use as recommended by guidelines. In the absence of such documentation, the currently requested zolpidem (Ambien) is not medically necessary.
