HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is 34 year old female with an industrial injury dated 10/19/2012. The injured worker's diagnoses include cervical herniated nucleus pulposus, lumbar disc bulge and left greater trochanteric bursitis. Treatment consisted of Magnetic Resonance Imaging (MRI) of cervical spine and lumbar spine, X-ray of the lumbar spine and cervical spine, prescribed medications, 12 sessions of physical therapy for hip and periodic follow up visits. In a progress note dated 4/1/2015, the injured worker reported moderate neck and back pain rated a 7/10. The injured worker also reported left lower extremity radicular pain. Objective findings revealed mild lumbar scoliosis and normal gait. The treating physician also noted that the neck and back range of motion were within normal limits. Magnetic Resonance Imaging (MRI) of the cervical spine revealed C5-6 herniated nucleus pulposus. X-ray of the lumbar spine dated 4/1/2015 revealed some loss of lordosis. The treating physician prescribed services for physical therapy 2x6 for cervical area now under review.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Physical therapy two times six for cervical area: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine. Decision based on Non-MTUS Citation Official Disability Guidelines(ODG).

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

Decision rationale: Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The Physical therapy two times six for cervical area is not medically necessary and appropriate.
