HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Texas, Florida, California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 57-year-old male, who sustained an industrial injury on 8/19/09. The injured worker was diagnosed as having lumbar spine musculoligamentous sprain/strain and bilateral lower extremity radiculitis with L4-5 and L5-S1 fusion, and disc bulge with moderate lateral stenosis. Treatment to date has included spinal cord stimulator placement, a home exercise program, and medications. Currently, the injured worker complains of mid to low back pain with radiating numbness and tingling to the bilateral lower extremities. The treating physician requested Norco 10/325mg #60 and 1 thoracolumbosacral orthosis back brace.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 10/325mg #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Hydrocodone/Acetaminophen.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20-9792.26 Page(s): 79, 80 and 88 of 127.

Decision rationale: The current California web-based MTUS collection was reviewed in addressing this request. They note in the Chronic Pain section: When to Discontinue Opioids: Weaning should occur under direct ongoing medical supervision as a slow taper except for the below mentioned possible indications for immediate discontinuation. They should be discontinued: (a) If there is no overall improvement in function, unless there are extenuating circumstances. When to Continue Opioids: (a) If the patient has returned to work; (b) If the patient has improved functioning and pain. In the clinical records provided, it is not clearly evident these key criteria have been met in this case. Moreover, in regards to the long term use of opiates, the MTUS also poses several analytical necessity questions such as: has the diagnosis changed, what other medications is the patient taking, are they effective, producing side effects, what treatments have been attempted since the use of opioids, and what is the documentation of pain and functional improvement and compare to baseline. These are important issues, and they have not been addressed in this case. As shared earlier, there especially is no documentation of functional improvement with the regimen. The request for the opiate usage is not medically necessary per MTUS guideline review.

One thoracolumbosacral orthosis (TLSO) back brace: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 301.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): ACOEM, Chapter 12, Low back, page 298.

Decision rationale: The California MTUS, specifically Chapter 12 of ACOEM dealing with the low back, note on page 298: Lumbar supports have not been shown to have any lasting benefit beyond the acute phase of symptom relief. In this case, the claimant is well past the acute phase of care. There is no evidence of lumbar spinal instability, or spondylolisthesis. Therefore, this request is appropriately not medically necessary.
