

DRAFT FOR DISCUSSION: Addition of RxCUI to MTUS Drug List V3

The attached spreadsheet provides the following additional information for each drug ingredient (generic drug) on the drug list:

- Dosage form
- Strength
- RxCUI
- Comments

The specific dosage forms and strengths listed are based, as appropriate, on the FDA approved dosage forms and strengths of the reference brand name drug(s) as listed in the FDA Orange Book and FDA Biological License Application approvals. Listed products are also limited to:

- Exclude pediatric dosage forms
- Include dosage forms that match Guideline References
- Include only FDA approved dosage forms currently on the market

This level of specificity is intended to ensure generic equivalency to the reference brand and reduce potential ambiguity of broad listings (e.g. drug name only or drug name and strength only). Listings that do not have a reference brand list all FDA approved dosage forms/strengths of the listed drug ingredient.

RxCUI values are those listed in RxNorm that correspond to the SCD/GPCK values:

- SCD – Semantic Clinical Drug describes a product by Ingredient + Strength + Dosage Form, e.g.
 - Celecoxib Capsule 100 mg
- GPCK – Generic Pack adds an additional separation when an SCD may be packaged different quantities that are important to differentiate, e.g.
 - Levalbuterol MDI 0.045MG/Actuation 80 dose container vs 200 dose container

RxCUI values are for the drug ingredient (generic drug) descriptor and not the brand name drug RxCUI.
