

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
<p>PART 1926—[AMENDED] Subpart A—General</p>		
<p>■ 1. The authority citation for subpart A of 29 CFR part 1926 is retained as follows: ...</p>		<p>CA cites authority at each section.</p>
<p>■ 2. Section 1926.6 is added to read as follows:</p>		
<p>§ 1926.6 Incorporation by reference.</p>	<p><u>§4884 Scope Standards Incorporated by Reference.</u></p>	
<p>(a) The standards of agencies of the U.S. Government, and organizations which are not agencies of the U.S. Government which are incorporated by reference in this part, have the same force and effect as other standards in this part. Only the mandatory provisions (i.e., provisions containing the word “shall” or other mandatory language) of standards incorporated by reference are adopted as standards under the Occupational Safety and Health Act. The locations where these standards may be examined are as follows: (1) Offices of the Occupational Safety and Health Administration, U.S. Department of Labor, Frances Perkins Building, Washington, DC 20210. (2) The Regional and Field Offices of the Occupational Safety and Health Administration, which are listed in the U.S. Government Manual.</p>	<p><u>Cranes shall be designed, constructed, and installed in accordance with the following standards which are hereby incorporated by reference.</u></p>	<p>Per FR page 47919, this is primarily a “technical amendment,” relocating referenced standards from 1926.31 to 1926.6 for “organizational purposes.” The FR (page 47919) made the following statement: “OSHA is adding to the list of documents incorporated by reference those documents that are newly incorporated by reference in these final rules. The Federal Register approved these documents, which are listed as follows, for incorporation by reference as of November 8, 2010: ANSI B30.5–1968; ASME B30.2–2005; ASME B–30.5–2004; ASME B30.7–2001; ASME B30.14–2004; AWS D1.1/D1.1M:2002; ANSI/AWS D14.3–94; BS EN 13000:2004; BS EN 14439:2006; ISO 11660–1:2008(E); ISO 11660–2:1994(E); ISO 11660–3:2008(E); PCSA Std. No. 2 (1968); SAE J185 (May 2003); SAE J987 (Jun. 2003); and SAE J1063 (Nov. 1993).” Therefore, the CA crane standard will adopt these new standards as indicated below.</p>
<p>(b) The materials listed in paragraphs (g) through (ff) of this section are incorporated by reference in the corresponding sections noted as</p>		<p>Fed/state formatting difference.</p>

FEDERAL: §	STATE:	RATIONALE
Procedures for Minimizing the Risk of Unintended Dangerous Boom Movement Appendix C to Subpart CC of part 1926— Operator Certification—Written Examination—Technical Knowledge Criteria		
Subpart CC—Cranes and Derricks in Construction		
§ 1926.1400 Scope.	§4880 Scope.	
	<u>(a) The Orders in this Group shall apply to derricks, cranes, and boom-type excavators, but they shall not apply to aerial devices designed and used for positioning personnel (See Article 24).</u>	1926 amended for placement in GISO. <i>[relocated from §4884(a)]</i>
(a) This standard applies to power operated equipment, when used in construction, that can hoist, lower and horizontally move a suspended load. Such equipment includes, but is not limited to: Articulating cranes (such as knuckle-boom cranes); crawler cranes; floating cranes; cranes on barges; locomotive cranes; mobile cranes (such as wheel-mounted, rough-terrain, all terrain, commercial truck-mounted, and boom truck cranes); multi-purpose machines when configured to hoist and lower (by means of a winch or hook) and horizontally move a suspended load; industrial cranes (such as carry deck cranes); dedicated pile drivers; service/mechanic trucks with a hoisting device; a crane on a monorail; tower cranes (such as a fixed jib, i.e., “hammerhead boom”), luffing boom and self-erecting); pedestal cranes; portal cranes; overhead and gantry cranes; straddle cranes; side boom cranes; derricks; and variations of such equipment. However, items	<u>(1) This standard applies to power operated equipment that can hoist, lower and horizontally move a suspended load with or without attachments. Such equipment includes, but is not limited to: Articulating boom cranes (such as knuckle-boom cranes); crawler cranes; floating cranes; cranes on barges; locomotive cranes; mobile cranes (such as wheel-mounted, rough-terrain, all terrain, commercial truck-mounted, and boom truck cranes); multi-purpose machines when configured to raise or lower by means of a hoist and horizontally move a suspended load; industrial cranes (such as carry deck cranes); cranes being used as dedicated pile drivers; service/mechanic trucks with a hoisting device; a crane on a monorail; tower cranes (such as a fixed jib, i.e., “hammerhead boom”, luffing boom and self-erecting); pedestal cranes; portal cranes; overhead/bridge and gantry cranes; straddle cranes; side boom cranes; derricks; and</u>	Amended with subcommittee and Washington State WAC 296-155-52900 clarifications.

FEDERAL: §	STATE:	RATIONALE
listed in paragraph (c) of this section are excluded from the scope of this standard.	<u>variations of such equipment. However, items listed in subsection (c) of this section are excluded from the scope of this standard.</u>	
(b) Attachments. This standard applies to equipment included in paragraph (a) of this section when used with attachments. Such attachments, whether crane-attached or suspended include, but are not limited to: Hooks, magnets, grapples, clamshell buckets, orange peel buckets, concrete buckets, drag lines, personnel platforms, augers or drills and pile driving equipment.	<u>(b) Attachments. This standard applies to equipment included in subsection (a) of this section when used with attachments. Such attachments, whether crane-attached or suspended include, but are not limited to: Hooks, magnets, grapples, clamshell buckets, orange peel buckets, concrete buckets, drag lines, personnel platforms, augers or drills and pile driving equipment.</u>	
(c) Exclusions. This subpart does not cover: (1) Machinery included in paragraph (a) of this section while it has been converted or adapted for a non-hoisting/lifting use. Such conversions/adaptations include, but are not limited to, power shovels, excavators and concrete pumps. (2) Power shovels, excavators, wheel loaders, backhoes, loader backhoes, track loaders. This machinery is also excluded when used with chains, slings or other rigging to lift suspended loads.	<u>(c) Exclusions. Group 13 does not cover: (1) Machinery included in section (a) of this section while it has been converted or adapted for a non-hoisting/lifting use. Such conversions/adaptations include, but are not limited to, power shovels, excavators and concrete pumps. (2) Power shovels, and excavators (except as prescribed by Article 94), wheel loaders, backhoes, loader backhoes, track loaders. This machinery is also excluded when used with chains, slings or other rigging to lift suspended loads.</u>	Amended to clarify applicability to power shovels and excavators.
(3) Automotive wreckers and tow trucks when used to clear wrecks and haul vehicles.	<u>(3) Automotive wreckers and tow trucks when used to clear wrecks and haul vehicles.</u>	
(4) Digger derricks when used for augering holes for poles carrying electric and telecommunication lines, placing and removing the poles, and for handling associated materials to be installed on or removed from the poles. Digger derricks used in work subject to 29 CFR part 1926, subpart V, must comply with 29	<u>(4) Digger derricks when used for augering holes for poles carrying electric and telecommunication lines, placing and removing the poles, and for handling associated materials to be installed on or removed from the poles. (A) Digger derricks used in work subject to the Electrical Safety Orders shall comply with</u>	The ESO and TCSO correspond to 1926 subpart Part V and with 1910.268 respectively.

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
CFR 1910.269. Digger derricks used in construction work for telecommunication service (as defined at 29 CFR 1910.268(s)(40)) must comply with 29 CFR 1910.268.	Section 2940.7 of those Safety Orders. <u>(B) Digger derricks used in construction work for telecommunication service (as defined in the Telecommunication Safety Orders) shall comply with those Safety Orders.</u>	
(5) Machinery originally designed as vehicle-mounted aerial devices (for lifting personnel) and self-propelled elevating work platforms. (6) Telescopic/hydraulic gantry systems. (7) Stacker cranes.	<u>(5) Machinery originally designed as vehicle-mounted aerial devices (for lifting personnel) and self-propelled elevating work platforms.</u> <u>(6) Telescopic/hydraulic gantry systems.</u> <u>(7) Stacker cranes.</u>	
(8) Powered industrial trucks (forklifts), except when configured to hoist and lower (by means of a winch or hook) and horizontally move a suspended load.	<u>(8) Powered industrial trucks (forklifts), except when configured to raise or lower by means of a hoist and horizontally move a suspended load.</u>	Modifications based on OSHA CPL 02-01-057 and 1/21/15 subcommittee clarifications.
(9) Mechanic's truck with a hoisting device when used in activities related to equipment maintenance and repair.	<u>(9) Mechanic's truck with a hoisting device when used in activities related to equipment maintenance and repair.</u>	
(10) Machinery that hoists by using a come-along or chainfall.	<u>(10) Multi-purpose machines or industrial trucks (forklifts) hoisting by use of a come-along or chainfall.</u>	Clarified as amended by subcommittee 1/21/15. "Machinery" is too broad for exclusion; it could exclude all come-alongs and chain falls from Group 13.
(11) Dedicated drilling rigs. (12) Gin poles when used for the erection of communication towers.	<u>(11) Dedicated drilling rigs.</u> <u>(12) Gin poles when used for the erection of communication towers.</u>	
(13) Tree trimming and tree removal work.		California is more protective; i.e., crane operators for tree trimming and removal are currently required to be certified. Use of cranes for tree trimming and removal is covered under GISO Article 12, Section 3427.
(14) Anchor handling or dredge related operations with a vessel or barge using an affixed A-frame.	<u>(13) Anchor handling or dredge related operations with a vessel or barge using an affixed A-frame.</u>	
(15) Roustabouts.	<u>(14) Unpowered, rolling material lifts with hand-powered winches (roustabouts).</u>	Definition for "roustabout" copied from 1610.1(c)(14)

Audible signal means a signal made by a distinct sound or series of sounds. Examples include, but are not limited to, sounds made by a bell, horn, or whistle.	<u>Audible signal. A signal made by a distinct sound or series of sounds. Examples include, but are not limited to, sounds made by a bell, horn, or whistle.</u>	
Blocking (also referred to as “cribbing”) is wood or other material used to support equipment or a component and distribute loads to the ground. It is typically used to support lattice boom sections during assembly/ disassembly and under outrigger and stabilizer floats.	<u>Blocking (also referred to as “cribbing”) is wood or other material used to support equipment or a component and distribute loads to the ground. It is typically used to support lattice boom sections during assembly/ disassembly and under outrigger and stabilizer floats.</u>	
Boatswain’s chair means a single point adjustable suspension scaffold consisting of a seat or sling (which may be incorporated into a full body harness) designed to support one employee in a sitting position.	<u>Boatswain’s chair. A single point adjustable suspension scaffold consisting of a seat or sling (which may be incorporated into a full body harness) designed to support one employee in a sitting position.</u>	
Bogie means “travel bogie,” which is defined below.	<u>Bogie. See “travel bogie.”</u>	
Boom (equipment other than tower crane) means an inclined spar, strut, or other long structural member which supports the upper hoisting tackle on a crane or derrick. Typically, the length and vertical angle of the boom can be varied to achieve increased height or height and reach when lifting loads. Booms can usually be grouped into general categories of hydraulically extendible, cantilevered type, latticed section, cable supported type or articulating type.	Boom. A member section of a crane or derrick, the lower end of which is affixed to a mast, base, carriage, or support, and the upper end supports a hook or other end attachment. The length of the boom shall be taken as the straight line distance between the axis of the foot pin and the axis of the end sheave pin.	
Boom (tower cranes): On tower cranes, if the “boom” (i.e., principal horizontal structure) is fixed, it is referred to as a jib; if it is moveable up and down, it is referred to as a boom.	<u>Boom (tower cranes): On tower cranes, if the “boom” (i.e., principal horizontal structure) is fixed, it is referred to as a jib; if it is moveable up and down, it is referred to as a boom.</u>	
Boom angle indicator means a device which measures the angle of the boom relative to	Boom Angle. The angle between the longitudinal centerline of the boom and the

distance that this subpart requires to be maintained from a power line.	<u>distance that these Orders require to be maintained from a power line.</u>	
Equipment means equipment covered by this subpart.		Unnecessary, and may actually result in less effective standard since it restricts the definition of “equipment” to this subpart or group.
Equipment criteria means instructions, recommendations, limitations and specifications.	<u>Equipment criteria means instructions, recommendations, limitations and specifications.</u>	
Fall protection equipment means guardrail systems, safety net systems, personal fall arrest systems, positioning device systems or fall restraint systems.	§3207. Personal Fall Protection System. A personal fall protection system includes personal fall arrest systems, positioning device systems, fall restraint systems, safety nets and guardrails.	Horizontal definition from sec. 3207. Fall protection is more thoroughly described in CSO Article 24.
Fall restraint system means a fall protection system that prevents the user from falling any distance. The system is comprised of either a body belt or body harness, along with an anchorage, connectors and other necessary equipment. The other components typically include a lanyard, and may also include a lifeline and other devices.	§3207. Personal Fall Restraint System. A system used to prevent an employee from falling. It consists of an anchorage, connectors, and body belt/harness. It may include, lanyards, lifelines, and rope grabs designed for that purpose.	Horizontal definition from sec. 3207.
Fall zone means the area (including but not limited to the area directly beneath the load) in which it is reasonably foreseeable that partially or completely suspended materials could fall in the event of an accident.	§4885. <u>Fall zone. The area (including but not limited to the area directly beneath the load) in which it is reasonably foreseeable that partially or completely suspended materials could fall in the event of an accident.</u>	
Flange points are points of contact between rope and drum flange where the rope changes layers.	<u>Flange points. Points of contact between rope and drum flange where the rope changes layers.</u>	
Floating cranes/derricks means equipment designed by the manufacturer (or employer) for marine use by permanent attachment to a barge, pontoons, vessel or other means of flotation.	<u>Floating cranes/derricks. Equipment designed by the manufacturer (or employer) for marine use by permanent attachment to a barge, pontoons, vessel or other means of flotation.</u>	

CALIFORNIA STANDARDS COMPARISON

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
For example means “one example, although there are others.”		Unnecessary due to CA formatting and usage.
Free fall (of the load line) means that only the brake is used to regulate the descent of the load line (the drive mechanism is not used to drive the load down faster or retard its lowering).	<u>Free fall (of the load line) means that only the brake is used to regulate the descent of the load line (the drive mechanism is not used to drive the load down faster or retard its lowering).</u>	
Free surface effect is the uncontrolled transverse movement of liquids in compartments which reduce a vessel’s transverse stability.	<u>Free surface effect is the uncontrolled movement of liquids in compartments which reduce a vessel’s stability.</u>	AC1: More inclusive and protective.
Hoist means a mechanical device for lifting and lowering loads by winding a line onto or off a drum.	Hoist. An apparatus for raising or lowering a load by the application of a pulling force, but does not include a car or platform riding in guides. Some common types of hoists are defined as follows:	
Hoisting is the act of raising, lowering or otherwise moving a load in the air with equipment covered by this standard. As used in this standard, “hoisting” can be done by means other than wire rope/hoist drum equipment.	<u>Hoisting. The act of raising, or lowering a load with equipment covered by this standard. As used in this standard, “hoisting” can be done by means other than wire rope/hoist drum equipment.</u>	
Include/including means “including, but not limited to.”	<u>Include/including means “including, but not limited to.”</u>	
Insulating link/device means an insulating device listed, labeled, or accepted by a Nationally Recognized Testing Laboratory in accordance with 29 CFR 1910.7.	<u>Insulating link/device means an insulating device listed, labeled, or accepted by a Nationally Recognized Testing Laboratory in accordance with 29 CFR 1910.7.</u>	
Jib stop (also referred to as a jib backstop), is the same type of device as a boom stop but is for a fixed or luffing jib.	<u>Jib stop (also referred to as a jib backstop). The same type of device as a boom stop but is for a fixed or luffing jib.</u>	
Land crane/derrick is equipment not originally designed by the manufacturer for marine use by permanent attachment to barges, pontoons, vessels, or other means of floatation.		AC1: Definition is clear in the context used.
List means the angle of inclination about the	<u>List means the angle of inclination about the</u>

longitudinal axis of a barge, pontoons, vessel or other means of floatation.	<u>longitudinal axis of a barge, pontoons, vessel or other means of floatation.</u>	
Load refers to the object(s) being hoisted and/or the weight of the object(s); both uses refer to the object(s) and the load-attaching equipment, such as, the load block, ropes, slings, shackles, and any other ancillary attachment.	Load (Working). The external load in pounds applied on the hoisting line, including the weight of load attaching equipment such as load blocks, shackles, slings, buckets, and magnets. <u>refers to the object(s) being hoisted and/or the weight of the object(s). Both uses refer to the object(s) and the load-attaching equipment, such as, the load block, ropes, slings, shackles, and any other ancillary attachment as defined by the crane/derrick manufacturer.</u>	
Load moment (or rated capacity) indicator means a system which aids the equipment operator by sensing (directly or indirectly) the overturning moment on the equipment, i.e., load multiplied by radius. It compares this lifting condition to the equipment's rated capacity, and indicates to the operator the percentage of capacity at which the equipment is working. Lights, bells, or buzzers may be incorporated as a warning of an approaching overload condition.	Load Moment (or rated capacity) Indicator. <u>A device that automatically monitors radius, load weight, and load rating and warns the crane operator of an overload condition.</u>	AC1 recommended mods.
Load moment (or rated capacity) limiter means a system which aids the equipment operator by sensing (directly or indirectly) the overturning moment on the equipment, i.e., load multiplied by radius. It compares this lifting condition to the equipment's rated capacity, and when the rated capacity is reached, it shuts off power to those equipment functions which can increase the severity of loading on the equipment, e.g., hoisting, telescoping out, or luffing out.	Load Moment (or rated capacity) Limiter. <u>A device that automatically monitors radius, load weight, and load rating and prevents movements of the crane which would result in an overload condition.</u>	AC1 recommended mods.

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
Typically, those functions which decrease the severity of loading on the equipment remain operational, e.g., lowering, telescoping in, or luffing in.		
Locomotive crane means a crane mounted on a base or car equipped for travel on a railroad track.	<u>Locomotive Crane. A crane mounted on a base or car equipped for travel on a railroad track.</u>	
Luffing jib limiting device is similar to a boom hoist limiting device, except that it limits the movement of the luffing jib.	<u>Luffing Jib Limiting Device. Includes jib hoist disengaging device, jib hoist shut-off, jib hoist disconnect, jib hoist hydraulic relief, jib hoist kick-outs, or automatic jib stop device. This type of device disengages jib hoist power when the jib reaches predetermined operating angles. It may also set-brakes or close valves to prevent the jib from lowering after power is disengaged.</u>	
Marine hoisted personnel transfer device means a device, such as a “transfer net,” that is designed to protect the employees being hoisted during a marine transfer and to facilitate rapid entry into and exit from the device. Such devices do not include boatswain’s chairs when hoisted by equipment covered by this standard.		Vessel-to-vessel transfer is outside CA jurisdiction.
Marine worksite means a construction worksite located in, on or above the water.	<u>Marine Worksite. A construction worksite located in, on, under or above the water.</u>	
Mobile crane means a lifting device incorporating a cable suspended latticed boom or hydraulic telescopic boom designed to be moved between operating locations by transport over the road.		CA relies on B30 standards to define.
Moving point-to-point means the times during which an employee is in the process of going to or from a work station.		“Moving point-to-point” requires no definition; furthermore, this definition is too narrow and restrictive.

monitoring and communicating with a diver.	<u>monitoring and communicating with a diver.</u>	
Tilt up or tilt down operation means raising/lowering a load from the horizontal to vertical or vertical to horizontal.	<u>Tilt Up or Tilt Down Operation.</u> <u>Raising/lowering a load from the horizontal to vertical or vertical to horizontal.</u>	
Tower crane is a type of lifting structure which utilizes a vertical mast or tower to support a working boom (jib) in an elevated position. Loads are suspended from the working boom. While the working boom may be of the fixed type (horizontal or angled) or have luffing capability, it can always rotate to swing loads, either by rotating on the top of the tower (top slewing) or by the rotation of the tower (bottom slewing). The tower base may be fixed in one location or ballasted and moveable between locations. Mobile cranes that are configured with luffing jib and/or tower attachments are not considered tower cranes under this section.	(V) Tower Crane. A crane in which a boom, swinging jib or other structural member is mounted on a vertical mast or tower. (1) Tower Crane (Climber). A crane erected upon and supported by a building or other structure which may be raised or lowered to different floors or levels of the building or structure. (2) Tower Crane (Free Standing). A crane with a horizontally swinging, usually non-luffing boom which may be on a fixed base or mounted on rails. (3) Tower Crane (Mobile). A tower crane which is mounted on a crawler, truck or similar carrier for travel or transit. (4) Tower Crane (Self-Erector). A mobile tower crane that is truck carrier mounted and capable of self-erection.	CA Section 4885, definition of "Tower Crane" also includes an illustrations (Figs. 15-17), thus we believe it is equally effective.
Travel bogie (tower cranes) is an assembly of two or more axles arranged to permit vertical wheel displacement and equalize the loading on the wheels.	<u>Travel Bogie (tower cranes). An assembly of two or more axles arranged to permit vertical wheel displacement and equalize the loading on the wheels.</u>	
Trim means angle of inclination about the transverse axis of a barge, pontoons, vessel or other means of floatation.	<u>Trim. The angle of inclination about the transverse axis of a barge, pontoons, vessel or other means of floatation.</u>	
Two blocking means a condition in which a component that is uppermost on the hoist line such as the load block, hook block, overhaul ball, or similar component, comes in contact with the boom tip, fixed upper block or similar	Two-Blocking. A condition in which the lower load block or hook assembly comes into contact with the upper load block or boom point sheave assembly.

FEDERAL: §	STATE:	RATIONALE
§ 1926.1411 Power line safety—while traveling under or near power lines with no load.	§ 5003.4. Power Line Safety - While Traveling Under or Near Power Lines with No Load.	
(a) This section establishes procedures and criteria that must be met for equipment traveling under or near a power line on a construction site with no load. Equipment traveling on a construction site with a load is governed by §§ 1926.1408, 1926.1409 or 1926.1410, whichever is appropriate, and § 1926.1417(u).	(a) This section establishes procedures and criteria that shall be met for equipment traveling under or near a power line with no load. Equipment traveling with a load is governed by §§ 5003.1, 5003.2 or 5003.3, whichever is appropriate, and §4991. <u>Exception: When traveling under the conditions set forth in Section 4991(b), the requirements of Section 5003.4 do not apply.</u>	Exception added for clarification.
	(1) The provisions of Electrical Safety Orders, Group 2, Article 37, shall also apply to any work in proximity to overhead power lines where more protective.	Subsection (a)(1) added to assure that provisions of California High-Voltage Electrical Safety Orders, which apply to all work in proximity to overhead lines, are not negated or superseded by this section.
(b) The employer must ensure that: (1) The boom/mast and boom/mast support system are lowered sufficiently to meet the requirements of this paragraph. (2) The clearances specified in Table T of this section are maintained. (3) The effects of speed and terrain on equipment movement (including movement of the boom/mast) are considered so that those effects do not cause the minimum clearance distances specified in Table T of this section to be breached. (4) Dedicated spotter. If any part of the equipment while traveling will get closer than 20 feet to the power line, the employer must ensure that a dedicated spotter who is in continuous contact with the driver/operator is	(b) The employer shall ensure that: (1) The boom/mast and boom/mast support system are lowered sufficiently to meet the requirements of this section. SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
section 5–1.7.1 of ASME B30.5–2004 (incorporated by reference, see § 1926.6) except that section’s paragraph (c) must not apply. (2) Option (2). Wire rope must be designed to have, in relation to the equipment’s rated capacity, a sufficient minimum breaking force and design factor so that compliance with the applicable inspection provisions in § 1926.1413 will be an effective means of preventing sudden rope failure.		
(c) Wire rope must be compatible with the safe functioning of the equipment.	<u>(b) Wire rope shall be compatible with the safe functioning of the equipment.</u>	
(d) Boom hoist reeving. (1) Fiber core ropes must not be used for boom hoist reeving, except for derricks. (2) Rotation resistant ropes must be used for boom hoist reeving only where the requirements of paragraph (e)(4)(ii) of this section are met.		Boom hoist reeving covered by section 4884, Standards incorporated by reference.
(e) Rotation resistant ropes. (1) Definitions. (i) Type I rotation resistant wire rope (“Type I”). Type I rotation resistant rope is stranded rope constructed to have little or no tendency to rotate or, if guided, transmits little or no torque. It has at least 15 outer strands and comprises an assembly of at least three layers of strands laid helically over a center in two operations. The direction of lay of the outer strands is opposite to that of the underlying layer.	<u>(e) Rotation resistant ropes.</u>	Rotation resistant ropes covered by section 4884, Standards incorporated by reference. Requirements overlap and, in some cases, conflict with referenced standards in section 4884. Furthermore, these criteria could conflict with the crane manufacturer’s criteria in subsection (a).
(ii) Type II rotation resistant wire rope (“Type II”). Type II rotation resistant rope is stranded rope constructed to have significant resistance		Ditto above.

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
to rotation. It has at least 10 outer strands and comprises an assembly of two or more layers of strands laid helically over a center in two or three operations. The direction of lay of the outer strands is opposite to that of the underlying layer.		
(iii) Type III rotation resistant wire rope (“Type III”). Type III rotation resistant rope is stranded rope constructed to have limited resistance to rotation. It has no more than nine outer strands, and comprises an assembly of two layers of strands laid helically over a center in two operations. The direction of lay of the outer strands is opposite to that of the underlying layer.		Ditto above.
(2) Requirements. (i) Types II and III with an operating design factor of less than 5 must not be used for duty cycle or repetitive lifts. (ii) Rotation resistant ropes (including Types I, II and III) must have an operating design factor of no less than 3.5. (iii) Type I must have an operating design factor of no less than 5, except where the wire rope manufacturer and the equipment manufacturer approves the design factor, in writing. (iv) Types II and III must have an operating design factor of no less than 5, except where the requirements of paragraph (e)(3) of this section are met.		
(3) When Types II and III with an operating design factor of less than 5 are used (for non-duty cycle, non-repetitive lifts), the following		Ditto above.

be placed on each side of the point to be cut. The length and number of seizings must be in accordance with the wire rope manufacturer's instructions.	<u>be placed on each side of the point to be cut. The length and number of seizings shall be in accordance with the wire rope manufacturer's instructions.</u>	
§ 1926.1415 Safety devices.	<u>§5017. Safety Devices.</u>	
(a) Safety devices. The following safety devices are required on all equipment covered by this subpart, unless otherwise specified:	(a) <u>The following safety devices are required on all equipment covered by Group 13, as applicable, unless otherwise specified: Note: See section 4968 for tower cranes.</u>	
(1) Crane level indicator. (i) The equipment must have a crane level indicator that is either built into the equipment or is available on the equipment. (ii) If a built-in crane level indicator is not working properly, it must be tagged-out or removed. If a removable crane level indicator is not working properly, it must be removed. (iii) This requirement does not apply to portal cranes, derricks, floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation.	(1) <u>Crane level indicator.</u> (A) <u>The equipment shall have a crane level indicator that is either built into the equipment or is available on the equipment. [See section 4924(e)]</u> (B) <u>If a built-in crane level indicator is not working properly, it shall be tagged-out or removed. If a removable crane level indicator is not working properly, it shall be removed. Exception: This requirement does not apply to portal cranes, derricks, floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation.</u>	
(2) Boom stops, except for derricks and hydraulic booms. (3) Jib stops (if a jib is attached), except for derricks.	(2) <u>Boom stops, except for derricks and hydraulic booms. [See section 4922]</u> (3) <u>Jib stops (if a jib is attached), except for derricks. [See section 4922]</u>	§4922. Crane Boomstops. (a) Cranes of such design that the boom could fall over backward shall be equipped with boomstops whenever the main boom is rope supported and the crane used for hook, clamshell, magnet, grapple, concrete bucket, or service presenting similar risk. The boomstop shall provide emergency protection against destructive damage and related hazard by opposing any unexpected upward and rearward boom movement beyond the working range. It shall not be used purposely as a substitute for normal procedures in stopping a boom being raised. (b) In the case of new cranes over 10 tons in capacity purchased after January 1, 1971, the required boomstops shall satisfy the following standards and each involved employer shall have substantial assurance of this in the form of crane manufacturers' warranties, test reports, charts, engineering calculations, etc. (1) The boomstops shall be strong enough to develop the ultimate strength of the boom in bending at the point of attachment or contact between boomstop and boom, which point should be located near the outer end of the basic inner section of the boom; however, the point

FEDERAL: §	STATE:	RATIONALE
		must be at least 5 feet above the operator's normal seat level when the crane is level and the boom vertical. (2) The ultimate bending strength of the boom referred to in (1) shall not be reduced by the nature of contact between the boomstop and boom; such points of contact to be so located and designed that forces developed by boomstop action on the boom will not cause prior local failure of any boom members. (3) The boomstop shall prevent that portion of the boom below the point of boomstop contact from upward and rearward movement beyond 90 degrees, or some lesser angle, in reference to the horizontal machinery deck. (4) The boomstop shall provide energy absorbing resistance to the upward and rearward movement of the boom throughout an angular range of the last 5 degrees of such movement as limited in (3). (c) Jibs shall have positive stops to prevent their movement of more than 5 degrees beyond the straight line of the jib and boom on conventional-type crane booms. (d) No boomstop shall remain in use unless it is in good operating condition and maintained in accordance with the certified agent's guidelines for maintenance and service.
(4) Equipment with foot pedal brakes must have locks.	<u>(4) Equipment with foot pedal brakes shall have locks.</u>	
(5) Hydraulic outrigger jacks and hydraulic stabilizer jacks must have an integral holding device/check valve.	<u>(5) Hydraulic outrigger jacks and hydraulic stabilizer jacks shall have an integral holding device/check valve.</u>	
(6) Equipment on rails must have rail clamps and rail stops, except for portal cranes.	<u>(6) Equipment on rails, except for portal cranes, shall have rail clamps and rail stops. (See Article 92)</u>	See Article 92, sections 4903-4905.
(7) Horn (i) The equipment must have a horn that is either built into the equipment or is on the equipment and immediately available to the operator.	<u>(7) Horn. The equipment shall have a horn that is either built into the equipment or is on the equipment and immediately available to the operator.</u>	Sec. 4936 (warning devices) applies to mobile cranes. By virtue of this location (sec. 5017), this will apply to all cranes.
(ii) If a built-in horn is not working properly, it must be tagged-out or removed. If a removable horn is not working properly, it must be removed.		This conflicts with subsection (b) below.
(b) Proper operation required. Operations must not begin unless all of the devices listed in this section are in proper working order. If a device stops working	<u>(b) Proper operation required. FEDERAL: §	STATE:	RATIONALE
properly during operations, the operator must safely stop operations. If any of the devices listed in this section are not in proper working order, the equipment must be taken out of service and operations must not resume until the device is again working properly. See § 1926.1417 (Operation). Alternative measures are not permitted to be used.	<u>working properly during operations, the operation shall be safely stopped. If any device listed in this section is not in proper working order, the equipment shall be taken out of service and operations shall not resume until the device is again working properly. See § 5008.1 (Operation). Alternative measures are not permitted to be used.</u>	
§ 1926.1416 Operational aids.	§5018. Operational aids.	
(a) The devices listed in this section (“listed operational aids”) are required on all equipment covered by this subpart, unless otherwise specified. (1) The requirements in paragraphs (e)(1), (e)(2), and (e)(3) of this section do not apply to articulating cranes. (2) The requirements in paragraphs (d)(3), (e)(1), and (e)(4) of this section apply only to those digger derricks manufactured after November 8, 2011.	<u>(a) The devices listed in this section (“listed operational aids”) are required on all equipment covered by Group 13, as applicable, unless otherwise specified.</u> <u>(1) The requirements in subsection (d)(4), (d)(5), and (d)(6) do not apply to articulating cranes.</u> <u>(2) The requirements in subsections (d)(3), (d)(4), and (d)(7) apply only to those digger derricks manufactured after July 7, 2012.</u>	By virtue of being in Art. 98.1, this would apply to all crane types. “As applicable” will limit to application as appropriate. July 7, 2012 is the effective date for CSO Article 15 from which this requirement is transferred.
(b) Operations must not begin unless the listed operational aids are in proper working order, except where an operational aid is being repaired the employer uses the specified temporary alternative measures. The time periods permitted for repairing defective operational aids are specified in paragraphs (d) and (e) of this section. More protective alternative measures specified by the crane/derrick manufacturer, if any, must be followed.	<u>(b) Operations shall not begin unless the listed operational aids, as applicable, are in proper working order.</u> <u>Exception: Where an operational aid is not in proper working order, equally protective alternative measures specified by the crane/derrick manufacturer, if any, may be followed.</u>	This is more protective and is consistent with current practice in CA.
(c) If a listed operational aid stops working properly during operations, the operator must safely stop operations until the temporary	<u>(c) If a listed operational aid stops working properly during operations, the operator shall safely stop operations until the device is</u>	Temporary alternative measures only permitted to the extent specified by the manufacturer.

FEDERAL: §	STATE:	RATIONALE
similar component, and the boom tip (or fixed upper block or similar component). The device must prevent such damage at all points where two-blocking could occur.		State effective date has previously been accepted by OSHA.
Temporary alternative measures: When two-blocking could only occur with movement of the load hoist, clearly mark the cable (so that it can easily be seen by the operator) at a point that will give the operator sufficient time to stop the hoist to prevent two-blocking, or use a spotter. When two-blocking could occur without movement of the load hoist, clearly mark the cable (so that it can easily be seen by the operator) at a point that will give the operator sufficient time to stop the hoist to prevent two-blocking, and use a spotter when extending the boom.		These temporary alternative measures not permitted in CA.
(e) Category II operational aids and alternative measures. Operational aids listed in this paragraph that are not working properly must be repaired no later than 30 calendar days after the deficiency occurs.		Only one category in California.
Exception: If the employer documents that it has ordered the necessary parts within 7 calendar days of the occurrence of the deficiency, and the part is not received in time to complete the repair in 30 calendar days, the repair must be completed within 7 calendar days of receipt of the parts. See § 1926.1417(j) for additional requirements.		
(1) Boom angle or radius indicator. The equipment must have a boom angle or radius indicator readable from the operator's station.	<u>5017(a)(9) Boom angle or radius indicator. The equipment shall have a boom angle or radius indicator readable from the operator's station [see section 4924(c)].</u>	Boom angle or radius indicators are safety devices in California; therefore this has been relocated to sec. 5017(a)(9).

CALIFORNIA STANDARDS COMPARISON

Attachment No. 2

DATE: July 15, 2015

Page 112 of 240

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
Temporary alternative measures: Radii or boom angle must be determined by measuring the radii or boom angle with a measuring device.		4924(c) Mobile cranes shall be provided with a boom angle or radius indicator which clearly shows the boom angle or radius distance in degrees to the operator at all times. Exception: When a boom angle or radius indicator is inoperative or malfunctioning, a qualified person shall determine the radius or boom angle by measurement until the indicator is restored to operation. When a boom angle or radius indicator is inoperative or malfunctioning, a qualified person shall determine the radius or boom angle by measurement until the indicator is restored to operation.
(2) Jib angle indicator if the equipment has a luffing jib. Temporary alternative measures: Radii or jib angle must be determined by ascertaining the main boom angle and then measuring the radii or jib angle with a measuring device.	<u>5017(a)(10) A jib angle indicator shall be provided if the equipment has a luffing jib [see section 4924(c)].</u>	Boom angle or radius indicators (and jib angle indicators by extension) are safety devices in California; therefore this has been placed in sec. 5017(a)(10).
(3) Boom length indicator if the equipment has a telescopic boom, except where the rated capacity is independent of the boom length. Temporary alternative measures. One or more of the following methods must be used: (i) Mark the boom with measured marks to calculate boom length, (ii) Calculate boom length from boom angle and radius measurements, (iii) Measure the boom with a measuring device.	<u>(3) Boom length indicator if the equipment has a telescopic boom. [See section 4954(b)].</u>	4954(b) Telescopic booms that have an indicator shall show the boom length from minimum to maximum and be visible to the operator from the operator's position at the controls.
(4) Load weighing and similar devices. (i) Equipment (other than derricks and articulating cranes) manufactured after March 29, 2003 with a rated capacity over 6,000 pounds must have at least one of the following: load weighing device, load moment (or rated capacity) indicator, or load moment (or rated	<u>5017(a)(11) Load weighing and similar devices.</u> <u>(A) Equipment (other than derricks and articulating cranes) manufactured after March 29, 2003 with a rated capacity over 6,000 pounds shall have at least one of the following: load weighing device, load moment (or rated</u>	Load indicating/load moment/load limiting devices are safety devices in California; therefore this requirement has been relocated to sec. 5017(a)(11). Copied from 1615.2(e)(4). Similar to 4924(b)(1), but would take precedent. (Broader coverage than 4924)

FEDERAL: §	STATE:	RATIONALE
	(rigger) assigned to that operation. 4999(b)(1) Additional for mobile cranes and derricks in construction: <u>In all operations where the weight of the load being handled is unknown and may approach the rated capacity, the operator shall verify that the load is within the rated capacity of the equipment by at least one of the following methods:</u>	
(i) The weight of the load must be determined from a source recognized by the industry (such as the load’s manufacturer), or by a calculation method recognized by the industry (such as calculating a steel beam from measured dimensions and a known per foot weight), or by other equally reliable means. In addition, when requested by the operator, this information must be provided to the operator prior to the lift; or	<u>(A) The weight of the load shall be determined from a source recognized by the industry (such as the load’s manufacturer), or by a calculation method recognized by the industry (such as calculating a steel beam from measured dimensions and a known per foot weight), or by other equally reliable means. In addition, when requested by the operator, This information shall be provided to the operator prior to the lift; or</u>	
(ii) The operator must begin hoisting the load to determine, using a load weighing device, load moment indicator, rated capacity indicator, or rated capacity limiter, if it exceeds 75 percent of the maximum rated capacity at the longest radius that will be used during the lift operation. If it does, the operator must not proceed with the lift until he/she verifies the weight of the load in accordance with paragraph (o)(3)(i) of this section.	<u>(B) The operator may begin hoisting the load to determine, using a load weighing device, load moment indicator, rated capacity indicator, or rated capacity limiter, if it exceeds 75 percent of the maximum rated capacity at the longest radius that will be used during the lift operation. If it does, the operator shall not proceed with the lift until he/she verifies the weight of the load in accordance with subsection (b)(1)(A).</u>	
(p) The boom or other parts of the equipment must not contact any obstruction.	4999(f) During Hoisting: *** (2) The load, boom, or other parts of the equipment shall not contact any obstruction in a way which could cause falling material or damage to the boom.	

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
(q) The equipment must not be used to drag or pull loads sideways.	4999(g) Side Loading. Side loading of booms shall be limited to freely suspended loads, and booms shall not be used for dragging loads sideways unless the boom is specifically designed and constructed to withstand such side loading.	
(r) On wheel-mounted equipment, no loads must be lifted over the front area, except as permitted by the manufacturer.	4999(k) On truck wheel-mounted cranes, no loads shall be lifted over the front area except as <u>permitted by the manufacturer or approved by a the certified agent agency.</u>	Modified to retain CA use of certified agents.
(s) The operator must test the brakes each time a load that is 90% or more of the maximum line pull is handled by lifting the load a few inches and applying the brakes. In duty cycle and repetitive lifts where each lift is 90% or more of the maximum line pull, this requirement applies to the first lift but not to successive lifts.	4994(c) The brakes shall be tested each time a load <u>is 90% or more of approaching</u> the rated load <u>as configured is handled</u> by raising the load a few inches and applying the brakes.	Modified to be equivalent to fed. State bases on the load chart which is easier for the operator to use than line pull which requires calculation based on reeving and other factors.
(t) Neither the load nor the boom must be lowered below the point where less than two full wraps of rope remain on their respective drums.	4999(d) The load or the boom shall not be lowered below the point where less than two full wraps of rope remain on grooved drums and three full wraps on ungrooved drums.	Copied from 4994(d) which is more protective.
(u) Traveling with a load. (1) Traveling with a load is prohibited if the practice is prohibited by the manufacturer. (2) Where traveling with a load, the employer must ensure that: (i) A competent person supervises the operation, determines if it is necessary to reduce rated capacity, and makes determinations regarding load position, boom location, ground support, travel route, overhead obstructions, and speed of movement necessary to ensure safety. (ii) The determinations of the competent person	4991. Travel (a) The travel of <u>boom-type equipment and</u> cranes or boom-type excavators shall be controlled so as to avoid collision with persons, material, and equipment. The cabs of units (of the revolving type) traveling under their own power shall be turned so as to provide the least obstruction to the operator's vision in the direction of travel, unless receiving signals from someone with an unobstructed view. (b) In transit, the following additional precautions for mobile cranes shall be exercised:	Federal verbiage added as subsections (c) and (d). Federal (u)(2)(ii) is redundant.

licensing program meets the requirements of paragraphs (e)(2) and (j) of this section, the equipment operator must either be: (i) Licensed by that government entity for operation of equipment within that entity's jurisdiction; or	<u>issues operator licenses for equipment covered under this Section, and that government licensing program meets the requirements of subsections (a)(3) and (a)(4) of this section, the equipment operator shall be licensed by that government entity for operation of equipment within that entity's jurisdiction.</u>	
(ii) qualified in compliance with paragraph (d) of this section.		1926.1427(a)(1)(ii) refers to paragraph (d), Option (3): Qualification by the U.S. military. This is not an option in CA.
(2) Where paragraph (a)(1) of this section is not applicable, the certification or qualification must comply with one of the options in paragraphs (b) through (d) of this section.		Only federal option 1 is permitted in CA. Federal options 2 and 3 are not permitted in CA.
(3) Exceptions: Operator qualification or certification under this section is not required for operators of derricks (see § 1926.1436), sideboom cranes (see § 1926.1440), or equipment with a maximum manufacturer-rated hoisting/lifting capacity of 2,000 pounds or less (see § 1926.1441).	Exceptions to Section 5006.1: <u>(1B) For cranes and derricks in construction: Operator qualification or certification under this section is not required for operation of derricks, side boom cranes or equipment with a maximum manufacturer-rated hoisting/lifting capacity of 2000 pounds or less.</u>	
	<u>(2) Operator qualification or certification under this section is not required for operation of articulating/knuckle-boom cranes having a boom length of less than 25 feet or a maximum rated load capacity of less than 15,000 pounds.</u>	Exception 2 is GISO 5006.1 Ex. 1, modified to provide limited exception for knuckle-boom cranes, consistent with current CA enforcement for knuckle-boom cranes. 1926.1400(c)(17) excludes articulating boom cranes performing many common tasks.
(4) Whenever operator qualification or certification is required under § 1926.1427, the employer must provide the qualification or certification at no cost to operators who are employed by the employer on November 8, 2010.		Required by section 3203.
(b) Option (1): Certification by an accredited	5006.1(a) Qualifications. The employer shall

(b) Maintenance and repair personnel must meet the definition of a qualified person with respect to the equipment and maintenance/repair tasks performed.	<u>(b) Maintenance and repair personnel shall meet the definition of a qualified person with respect to the equipment and maintenance/repair tasks performed.</u>	
§ 1926.1430 Training.	<u>§5012. Training – Additional Requirements for Cranes.</u>	
The employer must provide training as follows: (a) Overhead powerlines. The employer must train each employee specified in § 1926.1408(g) and § 1926.1410(m) in the topics listed in § 1926.1408(g).		1926.1408(g) [CA sections 5003.1(f) and 5003.2] already spell-out the training requirements. This requirement is redundant. Additionally, Section 3203 also requires the employer to conduct training. 1926.1410(m) refers back to 1408(g).
(b) Signal persons. The employer must train each employee who will be assigned to work as a signal persons who does not meet the requirements of § 1926.1428(c) in the areas addressed in that paragraph.		1926.1428(c) [CA section 5001.3(c)] already spells-out the training requirements. Additionally, Section 3203 also requires the employer to conduct training.
(c) Operators. (1) Operators-in-Training for equipment where certification or qualification is required by this subpart. The employer must train each operator-in-training in the areas addressed in § 1926.1427(j).		This requirement is redundant. Sections 5006.1 and 5006.2 require that training be conducted, including these specific topics and areas. Section 3203 also requires that training be conducted by the employer.
The employer must provide re-training if the operator-in-training does not pass a qualification or certification test.		This requirement is redundant; already covered by 5006.2(b)(4) and (b)(5).
(2) Transitional Period. During the four-year phase-in period for operator certification or qualification, as provided in § 1926.1427(k), employers must train each operator who has not yet been certified or qualified in the areas addressed in § 1926.1427(j).		This requirement is redundant; already covered by 5006.2(e)(3).
(3) Operators excepted from the requirements		This requirement is redundant; already covered

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
of § 1926.1427. The employer must train each operator excepted under § 1926.1427(a) from the requirements of § 1926.1427 on the safe operation of the equipment the operator will be using.		by 5006.2(a) and also by section 3203.
(4) The employer must train each operator of the equipment covered by this subpart in the following practices:	<u>(a) The employer shall train each operator of the equipment covered by Group 13 in the following practices:</u>	
(i) On friction equipment, whenever moving a boom off a support, first raise the boom a short distance (sufficient to take the load of the boom) to determine if the boom hoist brake needs to be adjusted. On other types of equipment with a boom, the same practice is applicable, except that typically there is no means of adjusting the brake; if the brake does not hold, a repair is necessary.	<u>(1) Whenever moving a boom off a support, first raise the boom a short distance (sufficient to take the load of the boom) to determine if the boom hoist brake requires adjustment. Note: Where more specific manufacturer's instructions are available for this process, they shall apply.</u> <u>(A) If the brake does not hold and cannot be adjusted to hold, the condition shall be repaired.</u>	Same requirement; verbiage modified to be regulatory.
See § 1926.1417(f) and (j) for additional requirements.	<u>(B) See §5008.1(e) [tag-out] and 5008.1(g) [adjustments or repairs] for additional requirements.</u>	
(ii) Where available, the manufacturer's emergency procedures for halting unintended equipment movement.	<u>(2) Where available, the manufacturer's emergency procedures for halting unintended equipment movement.</u>	Question: Does this conflict with 3314 which prohibits unintended movement?
(d) Competent persons and qualified persons. The employer must train each competent person and each qualified person regarding the requirements of this subpart applicable to their respective roles.		By definition, competent persons and qualified persons are required to be knowledgeable in these particular hazards.
(e) Crush/pinch points. The employer must train each employee who works with the equipment to keep clear of holes, and crush/pinch points and the hazards addressed in § 1926.1424 (Work area control).	§4993.1. Work Area Control. *** <u>(2) To prevent employees from entering these hazard areas, the employer shall:</u> <u>(A) Train each employee assigned to work on</u>

an evaluation of the employee’s knowledge, there is an indication that retraining is necessary. (3) Whenever training is required under subpart CC, the employer must provide the training at no cost to the employee.		
§ 1926.1431 Hoisting personnel.	§5004. Crane or Derrick Suspended Personnel Platforms.	
The requirements of this section are supplemental to the other requirements in this subpart and apply when one or more employees are hoisted.	(a) Scope. These Orders apply to the design, construction, testing, use and maintenance of personnel platforms, and the hoisting of personnel platforms on load lines of cranes and derricks.	
(a) The use of equipment to hoist employees is prohibited except where the employer demonstrates that the erection, use, and dismantling of conventional means of reaching the work area, such as a personnel hoist, ladder, stairway, aerial lift, elevating work platform, or scaffold, would be more hazardous, or is not possible because of the project’s structural design or worksite conditions. This paragraph does not apply to work covered by subpart R (Steel Erection) of this part.	(c) General Requirements. The use of a crane or derrick to hoist employees on a personnel platform is prohibited, except when the erection, use, and dismantling of conventional means of reaching the worksite, such as a personnel hoist, ladder, stairway, aerial lift, elevating work platform or scaffold, would be more hazardous or is not possible because of structural design or worksite conditions.	
(b) Use of personnel platform. (1) When using equipment to hoist employees, the employees must be in a personnel platform that meets the requirements of paragraph (e) of this section.	<u>(k)(10) Use of personnel platform. When using equipment to hoist employees, the employees shall be in a personnel platform that meets the requirements of this section.</u>	State verbiage is more inclusive.
(2) Exceptions: A personnel platform is not required for hoisting employees: (i) Into and out of drill shafts that are up to and including 8 feet in diameter (see paragraph (o) of this section for requirements for hoisting	<u>EXCEPTIONS: A personnel platform is not required for hoisting employees:</u> <u>1. Into and out of drill shafts that are up to and including 8 feet in diameter [see subsection (o) for requirements for hoisting these employees].</u>

performed; the method selected must be the same as the method that will be used to hoist the personnel.	<u>performed; the method selected must be the same as the method that will be used to hoist the personnel.</u> A single trial lift may be performed at one time for all locations that are to be reached from a single set up position.	
(2) The trial lift must be performed immediately prior to each shift in which personnel will be hoisted. In addition, the trial lift must be repeated prior to hoisting employees in each of the following circumstances: (i) The equipment is moved and set up in a new location or returned to a previously used location. (ii) The lift route is changed, unless the competent person determines that the new route presents no new factors affecting safety.	(1) ... This trial lift shall be performed immediately prior to placing personnel on the platform... (2) The trial lift shall be repeated prior to hoisting employees whenever the crane or derrick is moved and set up in a new location or returned to a previously used location. Additionally, the trial lift shall be replaced <u>repeated</u> when the lift route is changed unless the operator determines that the route change is not significant, i.e. the route change would not affect the safety of hoisted employees.	
(3) The competent person must determine that: (i) Safety devices and operational aids required by this section are activated and functioning properly. Other safety devices and operational aids must meet the requirements of § 1926.1415 and § 1926.1416. (ii) Nothing interferes with the equipment or the personnel platform in the course of the trial lift. (iii) The lift will not exceed 50 percent of the equipment's rated capacity at any time during the lift. (iv) The load radius to be used during the lift has been accurately determined.	(j)(1) ... The operator shall determine that all systems, controls and safety devices are activated and functioning properly; that no interferences exist; and that all configurations necessary to reach those work locations will allow the operator to remain under the 50 percent limit of the hoist's rated capacity, <u>and that the load radius to be used during the lift has been accurately determined.</u> Materials and tools to be used during the actual lift can be loaded in the platform, as provided in section 5004(h)(4) and (5) for the trial lift.	
(4) Immediately after the trial lift, the competent person must:	(4) A visual inspection of the crane or derrick, rigging, personnel platform, and the crane or

CALIFORNIA STANDARDS COMPARISON

Attachment No. 2
 DATE: July 15, 2015
 Page 205 of 240

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
(a) This section contains supplemental requirements for derricks, whether temporarily or permanently mounted; all sections of this subpart apply to derricks unless specified otherwise.		
A derrick is powered equipment consisting of a mast or equivalent member that is held at or near the end by guys or braces, with or without a boom, and its hoisting mechanism. The mast/equivalent member and/or the load is moved by the hoisting mechanism (typically basemounted) and operating ropes.	4885 Definitions Derrick. An apparatus consisting of a mast or equivalent member held at the top by guys or braces, with or without a boom, for use with a hoisting mechanism and operating rope, for lifting or lowering a load and moving it horizontally.	
Derricks include: A-frame, basket, breast, Chicago boom, gin pole (except gin poles used for erection of communication towers), guy, shearleg, stiffleg, and variations of such equipment.		These types of cranes are defined and/or illustrated in GISO Section 4885, including Plate II.
(b) Operation—procedures. (1) Section 1926.1417 (Operation) applies except for § 1926.1417(c) (Accessibility of procedures).	<u>4959. Operation – Procedures.</u> <u>(a) Section 5008.1 (Operation) applies except for §5008.1(b) (Accessibility of procedures).</u>	
	4961. Rated Load Marking. (a) For permanently installed derricks with fixed lengths of boom, guy and mast, a substantial durable and clearly legible rating chart shall be provided with each derrick and securely affixed where it is visible to personnel responsible for the safe operation of the equipment.	
(2) Load chart contents. Load charts must contain at least the following information: (i) Rated capacity at corresponding ranges of boom angle or operating radii. (ii) Specific lengths of components to which the	The chart shall include but not necessarily be limited to the following data: (1) Certified agent's approved load ratings at corresponding ranges of boom angle or operating radii.

FEDERAL: §	STATE:	RATIONALE
rated capacities apply. (iii) Required parts for hoist reeving. (iv) Size and construction of rope must be included on the load chart or in the operating manual.	(2) Specific length of components on which the load ratings are based. (3) Required parts for hoisting reeving. (4) Size and construction of the rope may <u>shall</u> be shown either on the rating chart or in the operating manual.	
(3) Load chart location. (i) Permanent installations. For permanently installed derricks with fixed lengths of boom, guy, and mast, a load chart must be posted where it is visible to personnel responsible for the operation of the equipment.	4961(a) For permanently installed derricks with fixed lengths of boom, guy and mast, a substantial durable and clearly legible rating chart shall be provided with each derrick and securely affixed where it is visible to personnel responsible for the safe operation of the equipment.	
(ii) Non-permanent installations. For derricks that are not permanently installed, the load chart must be readily available at the job site to personnel responsible for the operation of the equipment.	4961(b) For non-permanent installations, capacity charts shall be prepared for the particular installation based on information provided by the certified agent. The capacity charts shall be located at the derrick.	
(c) Construction. (1) General requirements. (i) Derricks must be constructed to meet all stresses imposed on members and components when installed and operated in accordance with the manufacturer's/builder's procedures and within its rated capacity. (ii) Welding of load sustaining members must conform to recommended practices in ANSI/AWS D14.3-94 (incorporated by reference, see § 1926.6) or AWS D1.1/D1.1M:2002 (incorporated by reference, see § 1926.6).	§4884. <u>Standards Incorporated by Reference.</u> (a) <u>Cranes and derricks shall be designed, constructed, and installed in accordance with the following standards which are hereby incorporated by reference.</u> *** (d) <u>Cranes and derricks manufactured after July 7, 2011 shall be designed, constructed and installed in accordance with the following applicable American National Standards Institute (ANSI)/American Society of Mechanical Engineers (ASME) standards which are hereby incorporated by reference:</u> *** <u>B30.6-1995, Derricks</u>	ASME B30.6, which is incorporated by section 4884, prescribes all these requirements.

FEDERAL: §	STATE:	RATIONALE
Section 1926.1427 of this subpart (Operator qualification and certification) does not apply.	equipment. *** Exception: Mobile and tower cranes regulated by Section 5006.1	
§ 1926.1437 Floating cranes/derricks and land cranes/derricks on barges.	Article 97.1. Floating Cranes / Derricks and Land Cranes/Derricks on Barges.	
(a) This section contains supplemental requirements for floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation (i.e., vessel/flotation device). The sections of this subpart apply to floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation, unless specified otherwise. The requirements of this section do not apply when using jacked barges when the jacks are deployed to the river, lake, or sea bed and the barge is fully supported by the jacks.	§4988.0. Scope. <u>The sections of this Article apply to floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation, unless specified otherwise.</u> <u>Exception: The requirements of this Article do not apply when using jacked barges when the jacks are deployed to the river, lake, or sea bed and the barge is fully supported by the jacks.</u>	
(b) General requirements. The requirements in paragraphs (c) through (k) of this section apply to both floating cranes/derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation.	§4988.1. <u>General requirements. Sections 4988.2 through 4988.6 apply to both floating cranes/ derricks and land cranes/derricks on barges, pontoons, vessels or other means of flotation.</u>	
(c) Work area control. (1) The requirements of § 1926.1424 (Work area control) apply, except for § 1926.1424(a)(2)(ii). (2) The employer must either: (i) Erect and maintain control lines, warning lines, railings or similar barriers to mark the boundaries of the hazard areas; or (ii) Clearly mark the hazard areas by a combination of warning signs (such as, “Danger—Swing/Crush Zone”) and high	§4988.2. <u>Work area control.</u> (a) <u>The requirements of §4993.1 (Work area control) apply, except for §4993.1(a)(2)(B).</u> (b) <u>The employer shall either:</u> (1) <u>Erect and maintain control lines, warning lines, railings or similar barriers to mark the boundaries of the hazard areas; or</u> (2) <u>Clearly mark the hazard areas by a combination of warning signs (such as, “Danger—Swing/Crush Zone”) and high</u>

visibility markings on the equipment that identify the hazard areas. In addition, the employer must train each employee to understand what these markings signify.	<u>visibility markings on the equipment that identify the hazard areas. In addition, the employer shall train each employee to understand what these markings signify.</u>	
(d) Keeping clear of the load. Section 1926.1425 does not apply.		California elects to retain requirements for protection from overhead loads found in Section 5002 (state counterpart for 1926.1425)
(e) Additional safety devices. In addition to the safety devices listed in § 1926.1415, the following safety devices are required: (1) Barge, pontoon, vessel or other means of flotation list and trim device. The safety device must be located in the cab or, when there is no cab, at the operator's station. (2) Positive equipment house lock. (3) Wind speed and direction indicator. A competent person must determine if wind is a factor that needs to be considered; if wind needs to be considered, a wind speed and direction indicator must be used.	<u>§4988.3. Additional safety devices. In addition to the safety devices listed in §5017, the following safety devices are required: (a) Barge, pontoon, vessel or other means of flotation list and trim device. The safety device shall be located in the cab or, when there is no cab, at the operator's station. (b) Positive equipment house lock. (c) Wind speed and direction indicator. A competent person shall determine if wind is a factor that needs to be considered; if wind needs to be considered, a wind speed and direction indicator shall be used.</u>	
(f) Operational aids. (1) An anti two-block device is required only when hoisting personnel or hoisting over an occupied cofferdam or shaft.	<u>§4988.3 Note: An anti-two-block device is required only when hoisting personnel or hoisting over an occupied cofferdam or shaft.</u>	Anti-two block is a safety device in CA.
(2) Section 1926.1416(e)(4) (Load weighing and similar devices) does not apply to dragline, clamshell (grapple), magnet, drop ball, container handling, concrete bucket, and pile driving work performed under this section.		1926.1416(e)(4) only applies to equipment over 6000# rated capacity; therefore this subsection is unnecessary. Furthermore, the equipment listed here is not likely to be 2000# or less in capacity.
(g) Accessibility of procedures applicable to equipment operation. If the crane/derrick has a cab, the requirements of § 1926.1417(c) apply. If the crane/derrick does not have a cab, the employer must ensure that:	<u>§4988.4. Accessibility of procedures applicable to equipment operation. If the crane/derrick has a cab, the requirements of §5008.1(b) apply. If the crane/derrick does not have a cab, the employer shall ensure that:</u>

FEDERAL: §	STATE:	RATIONALE
section.		
(i) Option (1)—Physical attachment. The crane/derrick is physically attached to the barge, pontoons, vessel or other means of flotation. Methods of physical attachment include crossed-cable systems attached to the crane/derrick and vessel/flotation device, bolting or welding the crane/derrick to the vessel/flotation device, strapping the crane/derrick to the vessel/flotation device with chains, or other methods of physical attachment.	<u>(1) Option (1) – Physical attachment. The crane/derrick is physically attached to the barge, pontoons, vessel or other means of flotation. Methods of physical attachment include crossed-cable systems attached to the crane/derrick and vessel/flotation device, bolting or welding the crane/derrick to the vessel/flotation device, strapping the crane/derrick to the vessel/flotation device with chains, or other methods of physical attachment.</u>	
(ii) Option (2)—Corralling. The crane/derrick is prevented from shifting by installing barricade restraints (i.e., a corralling system). Employers must ensure that corralling systems do not allow the equipment to shift by any amount of shifting in any direction.	<u>(2) Option (2) – Corralling. The crane/derrick is prevented from shifting by installing barricade restraints (i.e., a corralling system). Employers shall ensure that corralling systems do not allow the equipment to shift by any amount of shifting in any direction.</u>	
(iii) Option (3)—Rails. The crane/derrick must be prevented from shifting by being mounted on a rail system. Employers must ensure that rail clamps and rail stops are used unless the system is designed to prevent movement during operation by other means.	<u>(3) Option (3) – Rails. The crane/derrick shall be prevented from shifting by being mounted on a rail system. Employers shall ensure that rail clamps and rail stops are used unless the system is designed to prevent movement during operation by other means.</u>	
(iv) Option (4)—Centerline cable system. The crane/derrick is prevented from shifting by being mounted to a wire rope system. The employer must ensure that the wire rope system meets the following requirements: (A) The wire rope and attachments are of sufficient size and strength to support the side load of crane/derrick. (B) The wire rope is attached physically to the vessel/flotation device.	<u>(4) Option (4) – Centerline cable system. The crane/derrick is prevented from shifting by being mounted to a wire rope system. The employer shall ensure that the wire rope system meets the following requirements: (A) The wire rope and attachments are of sufficient size and strength to support the side load of crane/derrick. (B) The wire rope is attached physically to the vessel/flotation device.</u>	

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
<p>(C) The wire rope is attached to the crane/derrick by appropriate attachment methods (such as shackles or sheaves) on the undercarriage, and that the method used will allow the crew to secure the crane/derrick from movement during operation and to move the crane/derrick longitudinally along the vessel/flotation device for repositioning.</p> <p>(D) Means are installed to prevent the crane/derrick from passing the forward or aft end of the wire rope attachments.</p> <p>(E) The crane/derrick is secured from movement during operation.</p>	<p><u>(C) The wire rope is attached to the crane/derrick by appropriate attachment methods (such as shackles or sheaves) on the undercarriage, and that the method used will allow the crew to secure the crane/derrick from movement during operation and to move the crane/derrick longitudinally along the vessel/flotation device for repositioning.</u></p> <p><u>(D) Means are installed to prevent the crane/derrick from passing the forward or aft end of the wire rope attachments.</u></p> <p><u>(E) The crane/derrick is secured from movement during operation.</u></p>	
<p>(v) The systems/means used to comply with Option (1), Option (2), Option (3), or Option (4) of this section are designed by a marine engineer, registered professional engineer familiar with floating crane/derrick design, or qualified person familiar with floating crane/derrick design.</p>	<p><u>(5) The systems/means used to comply with Option (1), Option (2), Option (3), or Option (4) of this section are designed by a marine engineer, registered professional engineer familiar with floating crane/derrick design, or qualified person familiar with floating crane/derrick design.</u></p>	
<p>(6) Exception. For mobile auxiliary cranes used on the deck of a floating crane/derrick, the requirement specified by paragraph (n)(5) of this section to use Option (1), Option (2), Option (3), or Option (4) does not apply when the employer demonstrates implementation of a plan and procedures that meet the following requirements:</p> <p>(i) A marine engineer or registered professional engineer familiar with floating crane/derrick design develops and signs a written plan for the use of the mobile auxiliary crane.</p> <p>(ii) The plan is designed so that the applicable</p>	<p><u>Exception for subsection (e):</u> <u>For mobile auxiliary cranes used on the deck of a floating crane/derrick, the requirement specified by subsection (e) to use Option (1), Option (2), Option (3), or Option (4) does not apply when the employer demonstrates implementation of a plan and procedures that meet the following requirements:</u></p> <p><u>(1) A marine engineer or registered professional engineer familiar with floating crane/derrick design develops and signs a written plan for the use of the mobile auxiliary crane.</u></p> <p><u>(2) The plan is designed so that the applicable</u></p>	<p><i>DOSH: Do we want to allow this exception?</i></p>

FEDERAL: §	STATE:	RATIONALE
<p>requirements of this section are met despite the position, travel, operation, and lack of physical attachment (or corralling, use of rails or cable system) of the mobile auxiliary crane.</p> <p>(iii) The plan specifies the areas of the deck where the mobile auxiliary crane is permitted to be positioned, travel, and operate, and the parameters and limitations of such movements and operation.</p> <p>(iv) The deck is marked to identify the permitted areas for positioning, travel, and operation.</p> <p>(v) The plan specifies the dynamic and environmental conditions that must be present for use of the plan.</p> <p>(vi) If the dynamic and environmental conditions in paragraph (n)(6)(v) of this section are exceeded, the mobile auxiliary crane is attached physically or corralled in accordance with Option (1), Option (2) or Option (4) of paragraph (n)(5) of this section.</p>	<p><u>requirements of this section are met despite the position, travel, operation, and lack of physical attachment (or corralling, use of rails or cable system) of the mobile auxiliary crane.</u></p> <p><u>(3) The plan specifies the areas of the deck where the mobile auxiliary crane is permitted to be positioned, travel, and operate, and the parameters and limitations of such movements and operation.</u></p> <p><u>(4) The deck is marked to identify the permitted areas for positioning, travel, and operation.</u></p> <p><u>(5) The plan specifies the dynamic and environmental conditions that must be present for use of the plan.</u></p> <p><u>(6) If the dynamic and environmental conditions in requirement (5) are exceeded, the mobile auxiliary crane shall be attached physically or corralled in accordance with Option (1), Option (2) or Option (4) of subsection (e).</u></p>	
<p>(7) The barge, pontoons, vessel or other means of flotation used:</p> <p>(i) Are structurally sufficient to withstand the static and dynamic loads of the crane/derrick when operating at the crane/derrick's maximum rated capacity with all anticipated deck loads and ballasted compartments.</p> <p>(ii) Have a subdivided hull with one or more longitudinal watertight bulkheads for reducing the free surface effect.</p> <p>(iii) Have access to void compartments to allow for inspection and pumping.</p>	<p><u>(f) The barge, pontoons, vessel or other means of flotation used:</u></p> <p><u>(1) Are structurally sufficient to withstand the static and dynamic loads of the crane/derrick when operating at the crane/derrick's maximum rated capacity with all anticipated deck loads and ballasted compartments.</u></p> <p><u>(2) Have a subdivided hull with one or more longitudinal watertight bulkheads for reducing the free surface effect.</u></p> <p><u>(3) Have access to void compartments to allow for inspection and pumping.</u></p>	
<p>§ 1926.1438 Overhead & gantry cranes.</p>	<p>Article 92.1. Supplemental Requirements for</p>	

CALIFORNIA STANDARDS COMPARISON

SOURCE OF FEDERAL OSHA STANDARD(S):

SCOPE: Applicable throughout state unless otherwise noted.

FEDERAL: §	STATE:	RATIONALE
	Overhead & Gantry Cranes Used in Construction.	
<p>(a) Permanently installed overhead and gantry cranes. The requirements of § 1910.179, except for § 1910.179(b)(1), and not the requirements of this subpart CC, apply to the following equipment when used in construction and permanently installed in a facility: overhead and gantry cranes, including semigantry, cantilever gantry, wall cranes, storage bridge cranes, and others having the same fundamental characteristics.</p>		<p>This section is unnecessary. Permanently installed overhead and gantry cranes are covered by Article 92 which is state counterpart for 1910.179. <i>Question for AC: How can permanently installed gantry and overhead cranes <u>not</u> be GI?</i></p>
<p>(b) Overhead and gantry cranes that are not permanently installed in a facility. (1) This paragraph applies to the following equipment when used in construction and not permanently installed in a facility: Overhead and gantry cranes, overhead/bridge cranes, semigantry, cantilever gantry, wall cranes, storage bridge cranes, launching gantry cranes, and similar equipment having the same fundamental characteristics, irrespective of whether it travels on tracks, wheels, or other means.</p>	<p>§4915. Overhead and gantry cranes that are not permanently installed in a facility. (a) This Article applies to the following equipment when used in construction and not permanently installed in a facility: Overhead and gantry cranes, overhead/bridge cranes, semi-gantry, cantilever gantry, wall cranes, storage bridge cranes, launching gantry cranes, and similar equipment having the same fundamental characteristics, irrespective of whether it travels on tracks, wheels, or other means.</p>	<p>Since fed has no additional requirements for overhead and gantry in construction (only a few less requirements), CA proposes to make no reduction in requirements for overhead and gantry cranes in construction (as currently done).</p>
<p>(2) The following requirements apply to equipment identified in paragraph (b)(1) of this section: (i) Sections 1926.1400 through 1926.1414; §§ 1926.1417 through 1926.1425; § 1926.1426(d), §§ 1926.1427 through 1926.1434; § 1926.1437, § 1926.1439, and § 1926.1441.</p>	<p>(b) The requirements of Group 13 apply to equipment identified this section as appropriate except the following sections: Sections 4928.1(a) and (b)</p>	<p>Rather than list the 95% of the sections which DO apply, CA proposes to list by exception the 5% that DO NOT apply (easier for stakeholders to understand and apply). AC: is this section necessary? Group 13 should apply where appropriate.</p>
<p>(ii) The following portions of § 1910.179: (A) Paragraphs (b)(5),(6),(7); (e)(1),(3),(5),(6); (f)(1),(4); (g); (h)(1),(3); (k); and (n) of §</p>		<p>Since CSO is being recombined with GISO, there is no need to call-out specific sections of the GISO. They all apply as appropriate.</p>
